

# 1979 in review

VH Westy Hilger 07 was the grand champion female of the Polled Hereford show at the 23rd Keystone International Livestock Exposition. Standing from left: Frank Darcey, Jr., owner; Tammy Hamilton, Pennsylvania Polled Hereford Queen; Jack Shanks, judge; and Randall Becker, showman.

Farmers experienced a wet and rainy year. Spring brought its showers with temperatures that kept the ground from warming, and the summer months saw more precipitation and cool days and nights. Fall was unusually warm with, again, more than enough rainfall. All told, Mother Nature did not make it easy for farmers to plant or harvest their crops in 1979.

Gasohol started running through the pumps at several local service stations on December 12th. Its price tag was not much different than the cost of gasoline, at \$1.08 a gallon. Its first day's sale saw eight out of ten people choosing the gasohol over the gasoline to run their vehicles.

**YES** this building costs 40% less!

YES, it costs 40% less than conventional steel buildings!

## DRIVE TRACTOR, DO NOT HESITATE TO ASK FOR YOUR CASE DEALER. COMPARE

Case 4 Wheel Drive Tractors have Features the competition cannot compare

Only from Case: fingertip steering selection and amazing electronic sensing

REAR steering with electronic rocker "fine tuning" is simple and much easier for maneuvering around buildings

Flick...flick flick! As easily as you'd operate a light switch you can switch on-the-go from front to rear to coordinated to crab steering. When you switch to front steer, rear wheels center automatically

Solid state electronic sensors on the wheels respond instantly to every steering command in each of the four steering selections. Case steering does it your way, takes very little operator effort. Be sure to compare it with ordinary bend-in-the-middle steering on other tractors

This optional electronic indicator shows you the position of the rear wheels. In the "green light" position, rear wheels are centered. Each amber dot to right or left indicates, approximately, a 4° turn of rear wheels. Any pressure against rear wheels (nuts, hillside forces, etc.) is electronically sensed and compensated for

For operator control of rear wheels, simply touch the rocker switch to electronically activate rear wheel steering hydraulics

FUZ EQUIP.
