

## ATTENTION PENNSYLVANIA ALFALFA GROWERS.

# Now that you can use Furadan at seeding, here are four good reasons why you should.

Here's the big news about Furadan® insecticide-nematicide in Pennsylvania alfalfa. Furadan 10G & 4F are now cleared in Pennsylvania\* for seeding time application. And they are the only products you can use at seeding to control alfalfa blotch leafminers and potato leafhoppers. Here are the reasons why you should be using Furadan.

### **1. Save time and fuel with fewer trips.**

You can stop two of your biggest alfalfa insect problems while you save fuel-wasting sprays. Because you apply Furadan 4F at the same time you put on herbicides. So one trip can take care of everything.

### **2. No seedling injury.**

With Furadan, don't worry about seedling damage from chemicals applied below-ground. You can put Furadan right next to the seed and it won't affect germination. You'll be getting your crop off to a strong start.

### **3. No crop injury.**

You can protect your high value alfalfa without running over it. Because now you won't have to leave tracks from ground application equipment.

### **4. More uniform stand.**

When you take a look at the field right before cutting, you'll see a deep green crop with an even, uniform stand.

That's the Furadan payoff: more high quality, high protein alfalfa.

This season, take advantage of Furadan protection at seeding. Because Furadan stops more pests and saves more alfalfa. Read the label carefully and use only as directed. But use Furadan. From FMC Corporation, Agricultural Chemical Group, 2000 Market St., Philadelphia, PA 19103.

\*A Section 24C special local needs registration has been granted for Furadan in Pennsylvania. Furadan 4 Flowable is a restricted use pesticide. "For sale to and use only by certified applicators or persons under their direct supervision, and only for those uses covered by the certified applicator's certification."
