# THE PATZ SOLUTION: Reliable Year-Round Feeding

You know the problems caused by hard packed and frozen silage. Patz gives you two solutions to the problem — the Model RD-790 ring-drive silo unloader and the Model 98B surface-drive silo unloader.

Both unloaders feature a double-hook gathering chain with hardened steel cutters and claws that rip through frozen and packed silage. When you push the button, you know you can count on a smooth feeding operation.

Evaluate our powered silo wall cutters. Spring tension holds 4 self-sharpening steel cutter blades in place to follow the curve of the silo wall. This keeps silage from building up along the walls, so you can be sure that you're getting all the feed where it belongs... in the feeder and not stuck to the walls.

The claws and cutters of the gathering chain deliver a steady flow of silage day after day.

Want to know more about the Patz system? See your Patz dealer. He'll show you Patz quality and reliability... two important words to a farmer like you.

Patz double-hook gathering chain features cutters and claws

Rotating steel blades keep the silo wall free of silage buildup (shown without guards)
