

# Come & Hear

## Harvestall Chillcuring

### Straight Talk

**Some of these Harvestall owners will be at a Special Noon Dinner Meeting near you soon. Come and find out from them how they are achieving great savings and getting a better product too.**

**If you are in the market for grain storage, you can't do better than Harvestall. The Harvestall Grain Chillcuring system will save you!**

- **MONEY** — Savings in operating cost plus reduced grain shrinkage (compared to heat drying) will totally pay for the system in five years or less in most cases.
- **ENERGY** — The Harvestall uses only electricity, about 1½ kw hrs. per bushel. There is absolutely no gas or oil to buy.
- **GRAIN** — Because this is natural air drying, there is no heat damage, and no shrinkage due to loss of dry matter. Harvestall is slow and gentle to the grain, just like nature. So you get the maximum nutritional value.
- **TIME** — Grain is moved only once, from the field to the bin. At harvest there is no bottleneck resulting in a big saving in time and labor.
- **AGGRIVATION** — The Harvestall is so simple it almost takes care of itself. It's virtually maintenance free because the only moving parts are the fans.
