Ask the VMD

Leon Riegel Tim Trayer Edgar Sheaffer

Clippin' toenails —
stop before red signal

A reader asks:

I need to trim some of my cows hooves that have gotten too long over winter. Any advice on how-to would be appreciated, especially how short?

Dr. Riegel comments:

Cattle with long hooves lead to cattle with sore feet, usually from bruised heels.

This can be a tremendous economic loss because cows that are sore and uncomfortable standing have decreased conception rates, decreased milk production, and lose weight. Therefore, it is with good reason that

you concern yourself with trimming hooves.

The first thing that's necessary for trimming a cow's hoof is adequate restraint of the animal. If you are strong enough and the cattle are cooperative, this can be accomplished in a stall with the cow's leg held up while you're doing the trimming.

As you become weaker or the cattle being trimmed become less docile, more elaborate means of restraint have to be devised.

The ultimate in restraint which is used by most professional foot trimmers is a table where the cow can be strapped fast, her legs tied down, and then she can be turned over on her side.

You will also need a pair of hoof nippers and a sharp hoof knife. In most cases, this is all the equipment that is necessary to do the job. But, wood chisels with mallots, saws, and electric disc sanders have been used.

The actual trimming of the hoof is something that's difficult to describe. It's best to learn how by watching someone else, hopefully someone who has become expert at trimming.

When trimmed properly, the hoof wall should be trim-

med parallel with the sole of the foot and the toe shortened, but not too short that you draw blood.

This reminds me of an incident which I encountered my first year in practice. I was called out one evening to find a cow standing in a stall in a big pool of blood.

The farmer had taken a chisel and had cut the toe much too short on not one, but both hind feet. Blood was

all but spurting from what was left.

I was appalled at the sight of this, thinking, "How could someone do such a thing — trim a foot so short, not stopping before the bleeding had become so bad that it needed massive pressure bandages to stop it?"

I soon found out how this could be possible when I was told the farmer was color blind and didn't realize what he was doing until his son came in the barn and discovered his costly error.

If you have a question you would like answered by the team from Valley Animal Hospital, send it to Ask the VMD, Box 366, Lititz, Pa. 17543. Questions will be kept anonymous on request.

Rough & Tumble events listed

KINZERS — The farm fuel of the future will be combined with agricultural mechanization of the past at a "Corn Brew and Spring Show" Saturday, May 10, at the Rough and Tumble Engineers Museum and Grounds, Kinzers.

Ethanol "brewed" from a corn mash alcohol still will be used to operate an old engine for turning an antique washing machine.

Members of the Rough and Tumble Engineers Historical Association will be showing and demonstrating many types of educational items and equipment during the day-long program from 8 a.m. to 5 p.m. at the Kinzers site, located 10 miles east of Lancaster on U.S. Rt. 30.

Antique corn planting and processing equipment and machinery will be featured,

including planters ranging from early models to present-day equipment. The Rough and Tumble Auxiliary will prepare pig roast sandwiches.

On Friday, May 9, a steam boiler and engine seminar will be conducted by experienced steam engineers from 10 a.m. to 6 p.m. A slide and movie program also is scheduled to begin at 7 p.m.

The new Industrial Steam Museum will be in operation, including generators, pumps and compressors. Various models will be operating in the Hobby Building and two steam trains will be offering rides at 35 and 50 cents.

Additional future show dates include the 32nd Annual Reunion on Aug. 20-23 and the "Enshure-O-Rama and Whistle Blow" on Oct. 11.
