

Choose a date and come to the fair

LITITZ — Pennsylvania's county fair season is right around the corner.

There are some local fairs, some in distant corners of the state. There are some which are known far and wide, some which are attended by a small group of enthusiasts.

All of the fairs are special. Each guarantees fun and excitement for those who attend.

So, choose a date and come to the fair. Listed below are those fairs which are members of the Pennsylvania State Association of County Fairs:

JUNE

21-23	Sewickley
22-28	Centre Hall
25-30	Mt. Pleasant
25-30	Indiana

YOU'VE HEARD THE TALK.

There's a better way to dry grain. It's called **CHILLCURING™** because it means **CURING** without heat. Here's what the talk is all about.

THE GRAIN

Every kernel of grain is alive when it comes out of the field. It is a seed, able to grow because it has the ability to take on moisture. Likewise, it can be kept in a state of preservation by removing the moisture already in it.

But by heating the grain to dry it, the seed life is destroyed. By removing heat and moisture from the grain, it becomes dormant, and stays alive. Then it can ripen to full weight, losing only water while keeping valuable protein, starches and sugar.

THE SYSTEM

It's simple. Grain goes from the field right to the bin. With the unique **AIRFRAME™** and **AIRFLOOR™** the grain rests on a solid bed that allows maximum ventilation.

Clean dry air is the best curing medium for the grain. **GRAINLAMPS™** provide electric sunshine, cleaning and drying the air beneath the floor, before it passes through the grain.

Fans force air under the floor. Rising through the grain, this dry outside air carries away moisture and heat.

At the peak of the bin a jumbo 40" turbine, the **WHIRLCOOLER™**, puts nature to work for you. Wind and rising air keeps it turning, venting the system naturally.

A special **HARVESTAT™** Control System monitors the curing process. A simple setting controls the **GRAINLAMPS™** to make use of free, natural air.

THE FACTS

1. You can't beat Nature. **HARVESTALL GRAIN CHILLCURING™** uses the same elements that ripen and preserve grain if left to itself: free flowing air and infra red rays (sunshine).
2. **CHILLCURING™** has been tried and proven in 17 states on over 3000 farms. The research is in: **CHILLCURING™ WORKS!**
3. The **CHILLCURING™** system uses only the electricity to power fans and lights, using about 1½ KW hrs. per bushel. Compare that cost to other systems that use increasingly expensive fuels to get disappointing results.
4. The grain goes from the field to the bin and stays there till you need it. Save time and money at harvest with the one step **HARVESTALL CHILLCURING™** and storage system.
5. If you're in the market for grain storage, you owe it to yourself to look further into **HARVESTALL GRAIN CHILLCURING™**.
