Penn Jersey HARVESTORE® Salutes...

THE LARRY & LILY SHADE FAMILY For Their Fine Dairy Management!!!

HARVESTORE® - the answer for High Moisture Corn.

"My cows always tested between 3.4 and 3.5 with dry ground ear corn. Since beginning HARVESTORE® High Moisture Corn in October 1979, the cows' butterfat production has risen to 3.89. My test has never been so good!"

"Since my HARVESTORE® was erected in October of 1979, the increase in butterfat from 3.5 to 3.89 has raised the price of my milk by 65¢ per 100 lbs. milk. This increase in my price of milk more than makes the monthly HARVESTORE® payments. All of the money that I used to spend on grinding and molasses before the HARVESTORE® High Moisture Corn is now used to pay off other bills."

"Since I purchased my HARVESTORE® for High Moisture Corn in October, I haven't spent any money on purchased calf feed. I feed High Moisture Corn to my calves at 2 to 3 weeks of age. Do they look good!"

"I like the corn so much that I haul it to my other farms to feed steers and all of my other cattle. I auger it out of my feedroom into my pickup truck. My feedroom has a temporary wooden end on it. I plan to knock that out soon and make room for my second HARVESTORE® for Haylage!"

"What I really like about HARVESTORE® High Moisture Corn is the ease of putting it away. When I finish harvesting in the fall, I close the hatch and I have my feed for the entire year! I don't handle as much feed as I used to because I don't use ground ear corn."

Larry Shade
RD 1
Elizabethville, PA

Larry's cows eat the HARVESTORE® High Moisture Corn much better than the dry corn that he used to feed them.

Larry weighs all the corn the cows consume.

Larry's son Todd prepares to feed the calves.

Cows are eager eaters when Larry feeds them Harvestore® processed High Moisture Corn.

The cows butterfat production has risen to 3.89.

The increase in butterfat more than makes the monthly payments.
