flexibility that got him in trouble in the first place

Another application of managing in a crisis by using flexibility is sliding by in a pinch with reduced fertilization costs in a slum year. If the soil is reasonably

the dairyman time to devote to the essential problems. If he retains his young stock, he still allows himself the ability to build his operation again as his heifers freshen.

The temptation to get an off-farm job deserves ex-

time that gives him his greatest return. In this method, he can calve out a few more heifers, maybe even bring in a few more cows, and erect a cheap shed or lean-to for housing.

And in some instances with the high value of real estate, dairymen liquidate their operations here and reinvest in an operation elsewhere. The dairyman must look at this move cautiously.

Cheaper land may not be as productive. The quality and the length of the growing season may differ. He must look into the agricultural support services such as feed stores and milk markets. In spite of the low cost, cheap land could prove very expensive.

It's also important for the dairyman who considers this technique to look carefully before he makes his move at the tax consequences. First impression benefits can be quickly erased by tax liabilities.

Along that same line, the

treme caution. It may be compatible. But if it jeopardizes production and performance, the dairyman is heading in the wrong direction.

In certain cases, if the land is large enough to support more cows and the labor is available, it may be wise to spend a little more money for cheap housing for more

fertile, and depending on the crops, a dairyman can within reason reduce some of his overhead by cutting back a certain amount in this area.

If the dairyman is big enough to get into reduction, this might be the right way to go. For instance if the dairyman with 60 cows hits hard times, it may be sensible to sell off part of the milking herd, a good culling technique. This also generates immediate income and can in some instances size the herd to the amount of feed available from the farm that year. This can reduce the expenditure for off-farm feed.

Using this reduction technique, he also allows himself extra time to manage the animals left in the herd to best advantage. He gives himself more time to plan his business moves.

For some individuals, liquidation of the milking herd may temporarily bail the operation out and allow

milking cows and milk in shifts.

If the dairyman can get more cowpower with a minimal monetary investment, realizing that it will be inconvenient, the extra time spent to handle the extra cows may be the

dairyman could also sell out the farm but retain his cattle and equipment and rent facilities until his operation is providing enough income to once again invest in land.

The important thing, Pat, is that failure to allow flexibility helped cause his

## N.Y.-N.J. May milk pegged at \$11.90

NEW YORK, N.Y. — Dairy farmers supplying milk plants regulated under the New York-New Jersey marketing orders during May will be paid on the basis of a uniform price of \$11.90 per hundred pounds or 25.6 cents per quart.

Market Administrator Thomas A. Wilson, who announced May's price, also stated that the uniform farm price was \$11.96 per hundredweight in April 1980 and \$10.93 per hundredweight in May 1979. The uniform price is a marketwide weighted average of the value of farm milk used for fluid and manufactured dairy products.

The seasonal incentive funds removed \$.40 per hundredweight from the dairy farmers' uniform price for May, for a total of \$3,970,831.70. Deductions for this fund will continue through June and will be returned in the August through November uniform price calculations.

The total amount of milk

received from the 17,530 dairy farmers supplying the New York-New Jersey Marketing Area was 992,707,924 pounds during May 1980. This was more than 27.8 million pounds above last year. The gross value to dairy farmers for milk deliveries was \$119,595,826.69. Wilson explained this included differentials required to be paid to dairy farmers but not voluntary premiums or deductions authorized by the farmer.

Regulated milk dealers utilized 393,385,841 pounds or 39.6 percent of the total amount of milk for Class I. The Class I milk is used for fluid milk products such as homogenized, flavored, low-test and skim milks.

For May 1980, handlers

paid \$13.84 per hundredweight, or 29.8 cents per quart, for the milk used in Class I products compared with \$12.84 a year ago.

The balance of the milk, 60.4 percent, was used to manufacture Class II products including butter, cheese, ice cream and yogurt. For this milk the handlers paid \$11.54 per hundredweight.

The uniform price is based on milk containing 3.5 percent butterfat. For May 1980, a differential of 15.7 cents was applied to the price for each one-tenth of one percent that the milk tested above or below the 3.5 percent standard.

All prices quoted are for bulk tank milk received within the 201-210 mile zone from New York City.

### Kirkwood 4-H gives demonstrations

KIRKWOOD — Demonstrations were given at the June meeting of the Kirkwood Community 4-H Club.

Ray Wallace demonstrated the parts of his trumpet and showed the correct way to play it. Faye Pyle demonstrated the correct way to mix brownies. Sandy Hastings and Donna Pyle exhibited several cameras and explained how they worked. Chris Pyle told about peer counseling at the Swift

Middle School and Robin Mummau demonstrated how to make a chain out of chewing gum wrappers.

The cooking club The Kooky Cookers will meet at Anna Lefever's on Thursday, July 3 at 9:30 a.m.

The leaders served homemade ice cream and strawberries to all present.

The next meeting will be a swimming party at Donald Hastings on Tuesday, July 15 at 7 p.m.

*...and apply good dairy management to work his way out of his problems."*

## A Message to Those Fortunate Few Who Can Afford a Home in These Times.

Not everyone can afford a home today. But for those who can, what seems the worst of times may actually be the best.

### Fine Homes From \$50,000

At Boyne Falls, we make some of the country's finest custom made homes. Each is completely hand-crafted, and during its creation receives the painstaking individual attention most other home builders only dream of.

Naturally, the waiting list for homes like this is, in normal times quite long. In today's market, however, we can promise you a home much sooner.

### A Natural Way of Living

Unique in both style and building material, a Boyne Falls home is ideal for those who can afford to be different. For, rather than being conventional stick-built houses, they are log homes. And while a \$125,000 log home is far from being a log cabin, they are, nonetheless, completely at home in any natural setting you may have in mind.

### Design Your Own Home

A Boyne Falls home can be built from almost any design. Our specialty, in fact, is working closely with your architect, insuring your home is exactly what you want it to be.

### Let's Talk

We'll be pleased to discuss our homes further if you'll write or telephone and tell us a bit about your plans and the price range of home you have in mind.

Ask for our free brochure, or enclose \$4 for our colorful portfolio of homes.
