WASHINGTON, D.C. — An official of the U.S. Department of Agriculture Tuesday said oats in the new farmer-owned reserve are being called.

Donald Gillis, acting administrator of USDA's Agricultural Stabilization and Conservation Service, said oats are being called because prices at Chicago and Minneapolis—as adjusted to reflect farm-level prices—have been at or above the \$1.57 call level for five consecutive days.

Old grain reserve agreements for oats were called May 23.

Gillis said calling loans on oats in the reserve means farmers have 90 days from the date of notification of the call to repay their Commodity Credit Corporation reserve loans.

Under the grain reserve program, farmers own the commodities and are not required to sell their grain. If they do not repay the loan, however, they must forfeit the grain to the CCC. About 19.1 million bushels of oats are in the new grain reserve program.

County officials of the Agricultural Stabilization and Conservation Service

will officially notify producers their grain has been called and the date by which the loan must be redeemed.

Under the farmer-owned grain reserve program, established by Congress in the Food and Agriculture Act of 1977 and designed to stabilize marketing, farmers

are eligible to place wheat and feed grains into a reserve during periods of low prices. In return, farmers receive CCC price support loans on the grain in reserve as well as annual storage payments. If prices rise to the "release" level, farmers can repay the loan and market the crop without incurring a penalty.

The call level for feed grains under the new reserve program is 145 percent of the national average loan rate. The 1979 loan level for oats is \$1.08 per bushel. Data used by CCC in determining the call level includes a daily report by the Agricultural Marketing Service which shows prices at selected markets. The markets reviewed by CCC for oats are Chicago and Minneapolis.

Volumatic® III

silage distributor-unloader

by JAMESWAY®

Fast unloading

Another reason why all ring-drive silo unloaders are not alike: Big 26-inch diameter impeller pours out silage. Easily converts from rigid to swinging paddles in minutes to match silage conditions. Features abrasion resistant steel rim; removable top for easy access ... easy to service.

See us for systems and service that help make the good life better.

MOPRO

100

LIQUID

SILAGE FORTIFIER

A revolutionary new concept in improving silages. University tested and proven MOPRO Liquid Silage Fortifier is formulated to balance the major mineral and protein deficiencies of silages. It also prevents loss from mold and rot after being removed from the silo or trench. MOPRO is added at the time of ensiling and is applied by metering equipment with very little handling cost. MOPRO will not corrode mild steel tanks or brass fittings and has no free ammonia odor to irritate the eyes or skin. MOPRO is a homogeneous solution of ammonia salts, urea, cane molasses, and minerals (except salt and calcium) in an efficient liquid carrier. It provides nitrogen for improved fermentation in the rumen and contains a mineral balance of phosphorous, magnesium, and trace elements. MOPRO 100 will give a resulting silage of up to 14.3% protein.
