Save Energy and get FREE HOT WATER

with the revolutionary FREE HEATER!

HERE'S HOW IT WORKS

Rather than using noisy dust creating fans with fragile dirt collecting air cooled condensers the refrigerant is routed to a specially designed condenser/heat exchanger and its heat is transferred to the water

A thermostatically controlled valve delivers approximately 140°F water to the storage tank

In addition to the thermostatic valve a mixing valve is provided to permit prepping temperature water

Thus the Fre-Heater delivers two temperatures of water — prepping and washing

ELIMINATES REFRIGERATION SERVICE PROBLEMS!

The most common causes of slow cooling in milk cooling systems are related to the air cooled condenser

The Fre-Heater eliminates these problems because

- There is no air cooled condenser
- The Fre Heater is installed indoors
- There are no noisy fans to fail
- The head pressure is very stable — assuring longer compressor life
- There are no cold weather starting problems plus

the Fre-Heater conserves energy and produces Free Hot Water!

HOW MUCH HOT WATER CAN BE GENERATED?

There are many variables so this question cannot be answered directly however as a rule of thumb a Fre-Heater operating on 60° F well water will produce a volume of approximately 140° F water similar to the amount of milk produced during a milking

For more information write for Literature No BC 210
