How to protect your home during a power blackout

A Kohler Powerhouse Generator with optional Emergency Power Kit (connection box and transfer switch) puts electricity directly into the circuitry of your home. Now you can power essentials like the furnace, refrigerator, freezer, sump pump, and water pump with power to spare for appliances and lights.

- 1. Powerhouse Generator.** Choose 3500 watt or 5000 watt Kohler Powerhouse generator with manual or electric start to power your home. Produces 120/240 volt electricity. Powered by long-life Kohler cast-iron engine.
- 2. Connection Box.** The Kohler weatherproof outdoor connection box accepts the power cord from the generator. Installed on the exterior of your home, it permits generator power to flow to the Transfer Switch.
- 3. Transfer Switch.** Kohler's safety interlock switch transfers the circuitry of your home from "normal" line power to the emergency power source — your generator. The switch permits line power and emergency power to enter the circuitry, but not both at the same time.

KOHLER POWERHOUSE
