

CENTRAL HEAT FROM WOOD-COAL
(or Oil or Gas)

- Our Multifuel heating system automatically switches from one fuel to the other. It heats your house and your hot water. Safely. Reliably.
- You choose the most economical fuel. Or the most convenient. Either way, you're secure. Multifuel hot-water heat is the modern way to beat the energy crisis.

Shattercane

(Continued from Page B2)

Yield checks were made to compare yields in areas where control was good to yields in badly infested areas. The test plots were conducted, evaluated, and reported by Donald M. Robinson and Robert J. Anderson, adult farmer instructors from the Eastern Lancaster County School District

Yield checks of the control areas where little or no control of shattercane was obtained revealed that the corn yielded only 44 percent of the corn yield checked in areas where good control was obtained

Corn in the control areas had extremely small ears, many barren stalks, and the corn was not as mature as that in the clean areas of the plot

Effective (commercially acceptable), although not 100 percent complete, control was achieved with the Eradicane (7 3 pint rate) and the Eradicane (3.5 pint) plus Sutan (3 pint) combination.

Sutan (5 pint rate), double incorporated, gave moderate to good control on two of the three farms.

Sutan (5 pint rate) single incorporated, and Prowl (3 pint rate) reduced weed population considerably but not to a commercially acceptable level

Little or no control of shattergrass was achieved with the two control treatments

(Turn to Page B4)

Adult Farmer instructor Don Robinson displays a shattercane plant. While it looks a bit like Johnsongrass, shattercane has a much tighter and denser seed head which is darker than Johnsongrass's. Shattercane also can be pulled out of the ground quite easily and does not have the typical rhizome development displayed by Johnsongrass.
