

# ATTENTION FARMERS! ADVANCED AG SYSTEMS INTRODUCES CIRCLE STEEL BUILDINGS

## DO YOU REALLY NEED A STORAGE BUILDING THIS GOOD?

If you could afford a new building every 10 years, a Circle Steel building wouldn't be necessary. But most farmers make an investment in a building that will last longer than 10 years...many are investing in Circle Steel to get that longer life with less yearly maintenance.

If you want long-term return on your building investment, make it a Circle Steel...from

# Neuro AIR/LEG GRAIN CONVEYORS

- Portable • Safer
- Less Labor • Save Money

Why spend thousands of dollars on installing a leg and auger system for grain handling, when a Neuro pneumatic conveying system will do the job far easier and for a lot less money?

In addition, a Neuro System is more gentle on your grain . . . reducing breakage dramatically over augers and legs. You also gain versatility with a Neuro System because it's portable . . . move it anywhere, as opposed to fixed-location legs and augers.

Get out of the dust . . . save your health . . . with a Neuro System! Let us show you the many advantages of our wide selection of PTO or self-powered models. Contact us this week for full details.

## "Harvestall Chillcuring works.

It is the  
most  
profitable  
part of my  
operation."

**GREG ESHELMAN**  
Mohnton, PA

I really couldn't be more satisfied. First of all I like the efficiency at harvest. With just two of us working, the entire harvest was non-stop.

Then the 5¢ per bushel curing cost even included power for installation and our night light.

My buyer was quite impressed with my corn. Test weight was from 57 to 58 lbs. That means I got an extra \$300 per 25 ton truck load. Even the drivers commented on the good quality.

I'm an Ag Engineering student at Penn State, and we do a lot of work with drying systems. Out of curiosity I ran the Harvestall design through our computers and found that, for the most important aspect of drying air flow, the Harvestall bin is the optimum design.

Actually, the Harvestall is the most profitable part of my operation. With better marketing control I make an extra dollar per bushel. For the farmer who needs storage or drying, the Harvestall Chillcuring system is the best investment I can think of.

### The Harvestall Chillcuring System

It's simple. When grain comes out of the field it's a living seed. So instead of destroying the seed with high heat, moisture is removed with natural air ventilation. The grain keeps all its feed value, there is less shrinkage than with heat drying because only moisture is removed, not dry matter. You'll never see white dust in Chillcured corn. You actually save half of what you're used to losing in heat shrink.

There's no gas or oil to buy. Natural air carries away heat and moisture as the corn releases it.

Harvestall Chillcuring is a back-to-basics system that just simply makes good sense. Find out more about it.
