**Anything other than BAYMIX® Crumbles is only a one-cow solution to a whole herd problem**

**THE LOGIC BEHIND WHOLE HERD DEWORMING**

In an unwormed dairy herd, all animals deposit worm eggs on the farm and all animals are subject to further recontamination from infective larvae as herd parasitism continues unchecked.

In a herd dewormed only at freshening, an average of 10 out of 12 animals have not been dewormed. Because egg deposition has not been significantly reduced, and because of infective larvae already present on the farm, all animals are subject to heavy further recontamination.

After whole herd deworming with Baymix, egg deposition is dramatically reduced, and as a result herd recontamination is also significantly reduced with herd productive efficiency maintained. In fact, a recent study shows a benefit of 4.8 lbs./milk/cow/day average when cows are dewormed as late as 200 days into lactation despite the fact they were dewormed at freshening.

**"ATTENTION" ALL A.E. STALEY CO. WAXY-CORN CONTRACTS!**

We still have plenty of waxy-seed available for the grain farmers and also Waxy Hybrids are great for cattle and hog feeders. In this area they should plant WAXY-MAIZ Hybrid seed-corn. College feeding trials show 10% better gains on 7% less corn with WAXY fed to cattle. We have several WAXY-MAIZ Hybrids for this area. They yield the same as yellow dent corn, but have higher energy starch. Hogs gain better and get to market faster on WAXY-MAIZ. We can show you how to boost cattle and hog feeding profits.
