

## ATTENTION FARMERS! ADVANCED AG SYSTEMS INTRODUCES CIRCLE STEEL BUILDINGS

### DO YOU REALLY NEED A STORAGE BUILDING THIS GOOD?

If you could afford a new building every 10 years, a Circle Steel building wouldn't be necessary. But most farmers make an investment in a building that will last longer than 10 years...many are investing in Circle Steel to get that longer life with less yearly maintenance.

If you want long-term return on your building investment, make it a Circle Steel...from

## Neuero AIR/LEG GRAIN CONVEYORS

- Portable • Safer
- Less Labor • Save Money

Why spend thousands of dollars on installing a leg and auger system for grain handling, when a Neuero pneumatic conveying system will do the job far easier and for a lot less money?

In addition, a Neuero System is more gentle on your grain reducing breakage dramatically over augers and legs. You also gain versatility with a Neuero System because it's portable - move it anywhere, as opposed to fixed-location legs and augers. Get out of the dust - save your health - with a Neuero System! Let us show you the many advantages of our wide selection of PTO or self-powered models. Contact us this week for full details.

# "Harvestall Chillcuring works. I get big energy savings and I don't have to babysit a dryer."

DAN KOLB, Spring City, Pa.

This is my third year with the Harvestall system, and I've found it to be ideal for my setup. I've harvested corn at 30% with no problem. The thing I really like about the Harvestall is that I don't have to babysit a dryer. I can fill it and forget it. Plus there are really no major moving parts to wear out or break down.

"I can cure down 26%-30% corn for around 6¢ to 8¢ a bushel. 24%-25% would run considerably less.

"The way the Harvestall works is simple and effective. As for those who are skeptical, it's like the bumble bee: according to scientists he's not supposed to be able to fly. But he's too dumb to know it, so he flies anyway. So regardless of what anyone says, the Harvestall system works. It works for me and I'm happy with it. I do recommend the Harvestall for its economy and for its considerable savings on energy."

The Harvestall  
Chillcuring System

It's simple. When grain comes out of the field it's a living seed. So instead of destroying the seed with high heat, moisture is removed with natural air ventilation. The grain keeps all its feed value, there is less shrinkage than with heat drying because only moisture is removed, not dry matter. You'll never see white dust in chillcured corn. You actually save half of what you're used to losing in heat shrink.

There's no oil or gas to buy. Natural air carries away heat and moisture as the corn releases it.

Harvestall Chillcuring is a "back-to-basics" system that just simply makes good sense. Find out more about it.
