

THE SURGE BACKFLUSH SYSTEM . . .

THE AUTOMATIC WAY TO CONTROL MASTITIS!

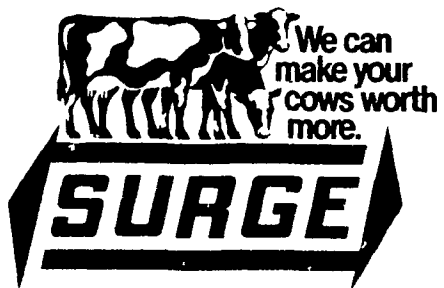

The Surge Backflush System can cut your mastitis losses substantially by helping to prevent mastitis-causing bacteria from hiding in the milker inflations and getting a free ride from infected cows to healthy cows.

Here's how it works. After the cow is milked out, the milking unit is switched from the milk line to the backflushing position. The system then treats the milking unit to a four-stage cleaning and sanitizing process.

It's all done automatically in just a shade over a minute, completely independent of the operator.

Let us show you this automatic mastitis fighter.
