\*Motor under normal load and conditions

- 2% voltage regulation-no load to full load
- Trouble free electronic excitation
- Four pole rotating field design at 1800 RPM
- Cast aluminum frame
- Direct drive cooling fan
- Ground Lug
- Drip proof design
- Safety shield
- Rodent screen
- Convenient lifting eye
- Welder receptical
- Grounded duplex recepticals
- All recepticals have circuit breakers
- All weather bearings
- Three year limited warranty to original purchaser

**OPTIONAL ACCESSORIES:**

- Off road trailers
- Power shafts
- Manual transfer switches
- Electrical cords
- Completely brushless units. Consult factory for motor starting characteristics and voltage dip specifications

# ABOUT MAXI-POWER P.T.O. GENERATORS

- This all new Maxi-Power generator has all the features that modern technology has available. We here at Maxi-Power have for the past two years been in the process of designing a PTO generator that meets the needs of the farmers.

An interchangeable box adds versatility to each unit. Gear boxes are available for 540 or 1000 RPM drive. Each box contains helical cut gears which are precision machined and aligned to insure quiet and dependable service.

The windings are all copper. It is a proven fact that copper is a better conductor than aluminum. This is the quality that you need for long power outages.

Most Farmers are aware of the fact that a generator should be exercised a few times a year, but with a busy schedule time seems to slip away. Maxi-Power has installed permanent magnets in each generator assuring that the residual magnetism is never lost. Even after years of idleness the Maxi-Power PTO generator will still produce electricity at its rated capacity. However, we still recommend the exercising of the generator.

Maxi-Power PTO generators have inherent voltage regulations, we have learned from past experience that this gives much better motor starting ability and longer life in comparison to solid state type. When major power outages occur, we here at Maxi-Power are found busy repairing generators of all makes, shapes, and sizes, one of the most frequent problems being solid state regulators.

A completely brushless design is standard on larger units and is also available on the complete line, even the smallest unit.

Each Maxi-Power generator is carefully manufactured locally by skilled crafts men and is tested before it leaves the factory to be sure that it meets up to our rigid standards. The ratings are all continuous standby which give a cooler running temperature than most generators on the market. It is then backed by a three year warranty. Only then can the generator bear the name Maxi-Power — a tradition of quality and service.

We are here at Maxi-Power to serve the public with emergency and prime power, so feel free to call us for more information or a demonstration. — 717-274-1483.
