Governors and their wives, from across the U.S., donated fabric scraps to Clara Cutman. The Dauphin County quilter pieced them into this replica of the 50 states.

BOWMANVILLE — Proposed revisions to the Brecknock Township zoning ordinance were discussed at a three-hour public hearing Thursday night attended by nearly 100 residents who were primarily farmers.

The predominantly agricultural audience expressed main concern about a 25-acre minimum restriction for intensified livestock operations.

A section of the revised zoning code would require a minimum area of 25 acres, of which 20 acres must be arable land for disposal of liquid manure, for poultry houses of more than 5000 birds, hog buildings for more than 25 sows and structures for more than 50 other livestock.

Many in the audience expressed that this minimum was too restrictive and would impede agriculture in the township since operations of 5000 birds, 25 sows or 50 other livestock are no longer feasibly economical.

Township officials indicated that more consideration would be given to this 25-acre minimum requirement.

Also discussed was the matter of height restrictions on accessory buildings in the ag district. This section may be clarified to more clearly exempt farm buildings from height restrictions.

The majority of the meeting dealt with

clarification and additional explanation of various terminology in the proposed changes dealing with the ag district, which comprises the largest area of the township.

There was a general feeling of support among the agricultural audience concerning the intent of the ordinance, with the exception of the 25-acre restriction for livestock operations.

Some comments were also expressed concerning setback requirements proposed for the ag district.

One of the major concerns of officials, to be resolved, centers on adequate

requirements for the disposal of manure.

Township officials will now consider the comments made at the hearing. No specific date was set for voting on the changes, but it will likely take place prior to the end of March.

The vote on the changes by the board of supervisors, when it occurs, will take place at one of their bi-weekly public meetings. The board meets the first and third Tuesdays.

Township residents expressing interest in the action will be notified when the vote will be scheduled.

Now Is The Time

heavy cattle are discounted; yet some feeders continue to keep them until their excess fat puts them into a Yield Grade of 4 or 5, and a lower price. We urge all producers to keep current with the markets and try to produce the kind of a product that will command a good price and some profit over all costs.

TO PRODUCE MAXIMUM GRAINS... It's a little late to increase the acreage of winter wheat and barley, but there are some things that might be done before harvest to increase the yield of both grain and straw. And the way the market looks, all the grains will be needed at

favorable prices. The spreading of straw manure on winter grain could take the place of some snow cover and add some fertilizer nutrients. However, on barley we must be careful of too much nitrogen causing severe lodging. In addition, wheat growers will surely want to make plans to top-dress their fields with a nitrogen fertilizer in March in order to get increases of both straw and grain. The demand for all kinds of feed grains seems to be on the increase; and if the alcohol stills get going, the demand for corn will be even greater. Plan now for ways to increase your returns from winter grains.

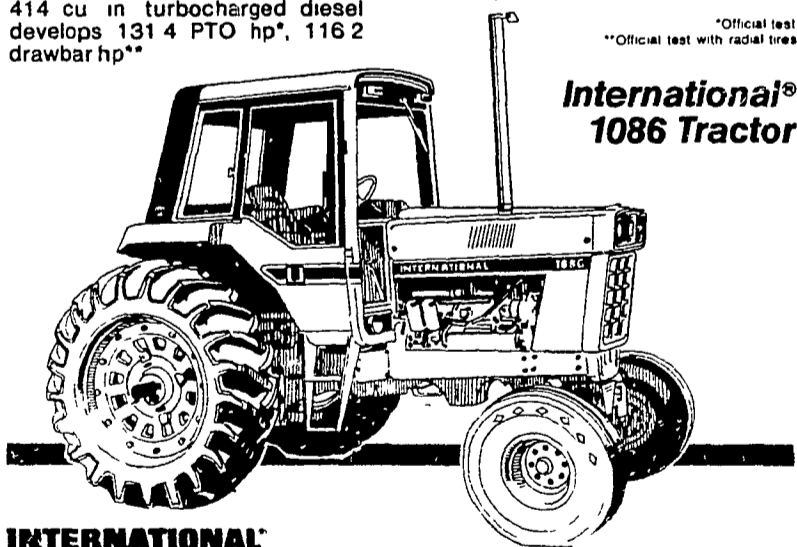

With this powerful performer, you'll be ready to take on more land

Here's a turbocharged tractor that's just the right size for handling the major work load in average-size farming operations. It's also ideal for the smaller operator who plans to rent or buy more land. The 1086 includes all the easy-handling characteristics designed into every Series 86 model including a mid-mount Control Center for unexcelled comfort, visibility, convenience.

- 414 cu in turbocharged diesel develops 131.4 PTO hp*, 116.2 drawbar hp**

- 16 speeds forward, 8 reverse, plus on-the-go shifting with Torque Amplifier transmission
- Mid-mount Control Center with two doors thoroughly padded and insulated to reduce interior sound level dramatically
- Large expanses of glass, one-piece windshield, underhood muffler for unimpaired visibility

See all Series 86 tractors now. Finance plans available.
