

# Everything we have built our reputation on is built into these tractors.

All the features that have made Massey-Ferguson farm tractors today's value leaders are built into this rugged family of 34 to 81 horsepower tractors.

They provide outstanding fuel efficiency, reliable hydraulic systems, and excellent range of working speeds, plenty of comfort and convenience and a whole lot more.

And talk about standard equipment. Power steering, 3-point linkage with draft and position control, adjustable front axles, foam float or spring suspension seats and a number of other features are included at no extra cost.

You may find that the "base" tractor has everything you need. But if not, there's a long list of options and accessories for you to choose from so you can tailor to your specific requirements.

## Choose from 16 rugged models

Options	MF 230 (34 hp)*	MF 245 (42 hp)*	MF 255 (52 hp)*	MF 265 (60 hp)*	MF 275 (67 hp)*	MF 285 (81 hp)*

Narrow Orchard		●		●		

\* Mfg's rated PTO horsepower

There are six sizes and five configurations available — for a total of 16 different models. And everyone of them is built extra-rugged to give you a good return on your investment. . . whether it's the only tractor you own, or one among many.

So read on and get to know these rugged performers. Then go visit your Massey-Ferguson dealer and take a first hand look.

## The Perkins name on the outside means long life inside

Every MF 34-81 horsepower tractor features diesel power by Perkins. These engines are known world-wide for their dependable, efficient performance in a wide variety of applications. They've proven themselves over and over as the best powerplants available for use with today's modern tractors.

### ★ Big fuel efficiency

The direct injection design of these engines is simple and provides excellent fuel economy and easy starting.

Fuel is injected directly into the piston cavity through an injection nozzle for efficient mixing of fuel and air. Effective filtration protects the fuel system from dirt.

All 4 cylinder engines feature a five bearing counterbalanced crankshaft for hours of dependable service. Crankshaft is induction hardened for added durability.

Easily replaceable cylinder sleeves and pistons decrease downtime and give you an engine that's like new after thousands of hours of use.

### ★ Extra lugging ability

A big bore and 5 (127 mm) stroke make these engines real workhorses. The aluminum pistons feature bowl type combustion chambers for excellent torque back up and the large cylinders provide extra power for tough jobs.

This reserve lugging power at low rpm means better performance in the field. The rotary fuel pump has no delivery valves. Instead the injectors are fed directly. This design has the advantage of virtually eliminating adjustments once the fuel pump has been factory calibrated.

The fuel pump and cam shaft feature an all gear drive to help assure timing accuracy throughout the life of the engine.

### ★ Minimum of maintenance

The design of these engines also makes daily maintenance, as well as long term maintenance, fast and easy. You get going faster and stay on the go longer.
