

Quality Stanfield Product

CREEP FEEDER

Includes:

- Large open feed pan to simulate floor feeding.
- Sturdy aluminum bracket for quick feeder in-and-out
- Generous 1 1/4 gallon hopper capacity.

Not just another creep feeder! A farm tested natural way to start two and three day-old pigs on solid feed. Pigs learn to eat creep feed before weaning. So you wean faster and pigs do better under less stress.

Robin Earnest, the 1980 Milton Tomato Harvest Queen, was on hand to honor the top tomato growers during the Annual Vegetable Conference held this week in Hershey.

Tomato queen honors growers

HERSHEY — Seventeen-year-old Robin Earnest of R3 Milton wears the crown of a queen. Actually, she holds the title of 1980 Milton Tomato Harvest Festival Queen.

Robin, who is a senior at Milton High School, is the daughter of Norman and Nancy Bailey. Crowned last September, the blonde-haired, blue-eyed beauty served the tomato and vegetable industry on Tuesday during the annual meeting here by awarding recognition plaques to top tomato growers of the year.

Along with the annual meeting, Robin explained her responsibilities also included overseeing the week-long tomato festival held at Milton in September. She said the town puts on spaghetti dinners and even hosts a football game called the 'Tomato Bowl'.

After graduation from high school, Robin said she plans to attend nursing school in Reading. The Tomato Queen revealed she enjoys eating tomatoes almost any way — just plain with salt and pepper and mayonnaise — but most of all in pizza.

"Harvestall Chillcuring works."

It is the most profitable part of my operation."

The Harvestall Chillcuring System

It's simple. When grain comes out of the field it's a living seed. So instead of destroying the seed with high heat, moisture is removed with natural air ventilation. The grain keeps all its feed value, there is less shrinkage than with heat drying because only moisture is removed, not dry matter. You'll never see white dust in Chillcured corn. You actually save half of what you're used to losing in heat shrink.

There's no gas or oil to buy. Natural air carries away heat and moisture as the corn releases it.

Harvestall Chillcuring is a back-to-basics system that just simply makes good sense. Find out more about it.

I really couldn't be more satisfied. First of all I like the efficiency at harvest. With just two of us working, the entire harvest was non-stop.

Then the 5¢ per bushel curing cost even included power for installation and our night light.

My buyer was quite impressed with my corn. Test weight was from 57 to 58 lbs. That means I got an extra \$300 per 25 ton truck load. Even the drivers commented on the good quality.

I'm an Ag Engineering student at Penn State, and we do a lot of work with drying systems. Out of curiosity I ran the Harvestall design through our computers and found that, for the most important aspect of drying air flow, the Harvestall bin is the optimum design.

Actually, the Harvestall is the most profitable part of my operation. With better marketing control I make an extra dollar per bushel. For the farmer who needs storage or drying, the Harvestall Chillcuring system is the best investment I can think of.
