DEALER INQUIRIES INVITED

Anything other than BAYMIX Crumbles is only a one-cow solution to a whole herd problem

THE LOGIC BEHIND WHOLE HERD DEWORMING

In an unwormed dairy herd, all animals deposit worm eggs on the farm and all animals are subject to further recontamination from infective larvae as herd parasitism continues unchecked.

In a herd dewormed only at freshening, an average of 10 out of 12 animals have not been dewormed. Because egg deposition has not been significantly reduced, and because of infective larvae already present on the farm, all animals are subject to heavy further recontamination

After whole herd deworming with Baymix, egg deposition is dramatically reduced, and as a result herd recontamination is also significantly reduced with herd productive efficiency maintained. In fact, a recent study shows a benefit of 4.8 lbs./milk/cow/day average when cows are dewormed as late as 200 days into lactation despite the fact they were dewormed at freshening.

BAYMIX IS AVAILABLE AT YOUR LOCAL NEW HOLLAND SUPPLY DEALER
