

## Where Will She Be 2 Years From Now?

Will that replacement heifer be ready to produce to her full bred-in capacity? Or will she lag behind, not ready to give her all? How you treat her from day one, makes all the difference.

To ensure a healthy, quick-nursing calf, treat the dry mother cow right. The Wayne way. Then start her calf on day four on a Wayne milk replacer. (Twenty-five pounds replaces 225 pounds of milk.) Also start dry feeding Wayne Calf Krunch.

Four months, and your Wayne-fed heifer is a lively 300 pounder. At 14, she can hit up to 750 pounds and be ready for breeding. See us for the program that works.

Wayne cares. And so do we. That's what makes the difference.
