**AIR PATTERN  
and MOVEMENT**

This is the key to excellent ventilation. Twelve individual adjustable nozzles control air direction up and down, the length of throw and velocity. The length of throw is crucial in avoiding down drafts at the walls. The velocity ensures proper mixing of air at the ceiling level, uniform temperature and proper air motion at the livestock or poultry level. This air pattern once set never changes.

### FARROWING CRATES

- New European Style
- Hot Dipped Galvanized
- Farrowing Crates reduce creep crushings because they are narrow at the top and wide at the bottom. This design ensures that the sow takes extra care in rising and lying down.
