When your new home is five years old, what fuel will be available to heat it?

Conventional heating systems tie you to a single fuel. In these times of uncertain price and supply, that's a risky situation.

The HS-Tarm Type OT boiler for hot-water central heating systems is different. It burns wood, coal, oil, or gas, and can heat with electricity as well. When you're not burning solid fuel, automatic controls switch to the backup fuel of your choice.

Installing an HS-Tarm Type OT boiler in your new home will give you maximum flexibility in choosing your heating fuel, year after year. There's no reason to settle for less.
