

Mulches do much for garden

LITITZ — If the weeds in your garden seem to have more energy than you do, why not try mulching? Mulches cut down on weeds and also help the home gardener in a number of other ways.

Mulches conserve water by cutting evaporation losses, and may also help water penetrate into the soil, especially from hard showers, when most of the water normally runs off. Mulches also protect vegetables and flower plants from splashing mud and dirt. Some mulches may even help protect plants from insect damage.

Many kinds of materials make good mulches. Practically anything will work, so long as it allows the penetration of water and does not pack to exclude air from the soil.

Organic mulches break down — some faster than others — thereby enriching the soil. However, if the mulch contains a high ratio of carbon to nitrogen, a temporary nitrogen shortage in the soil could result unless extra nitrogen is added. Sawdust and straw will do this.

Where appearance is important such as around the house or in a flower bed, choose an attractive mulch. Many organic mulches provide a neat covering that makes a nice foil for flowers and shrubs.

Availability and cost are two prime factors in the choice of a mulch.

Bark and wood chips are ideal mulches, especially for shrubs and ground covers. They are attractive and long-lasting. Use the coarse grades for trees and shrubs, the finer grades for flowers and ground covers. Apply a four to six inch layer for long-lasting weed control in shrubs. On flowers, however, use only one to two inches.

Licorice root is one of the most satisfactory mulches for flower beds.

Cocoa bean hulls are available in some areas. These do tend to pack, so they should not be used more than two inches deep. They are also sometimes toxic to azaleas. However, for many plants they are

quite satisfactory and very attractive.

Grass clippings are among the cheapest and most readily available of mulches. The problem with grass clippings, however, is that they tend to rot and pack tightly. This can be overcome by drying the clippings first, or by stirring repeatedly until dry once in place. Grass clippings are probably most at home in the vegetable garden.

Straw is another excellent mulch for the vegetable garden. Wheat straw is available from many farmers in the state right now.

Pine needles make an attractive mulch, especially for azaleas, rhododendrons, wild flowers, and in naturalistic settings.

Coffee grounds are an excellent mulch for small areas. They have a nice texture and color.

Black plastic is a good mulch for controlling weeds, although it may be hard to apply after plants are already in the ground. Widely used on vegetable gardens, it can be dressed up for the flower garden with a thin cover layer of another attractive mulch.

Newspaper also makes an effective mulch that looks better when covered with a thin layer of another material. First give the soil some extra nitrogen fertilizer. Then spread three to six sheets of newspaper on the ground. Cover with a fancier mulch material for the flower garden, or with a thin layer of soil for the vegetable garden in order to hold it in place.

Another excellent mulch for weed control in vegetables is aluminum foil. It has the added advantage of keeping the soil cool. It also aids plant growth by reflecting light back up under the plants.

Cucumbers grow quickly from seeds planted in warm garden soil. To save space, run cucumber vines up supports.

You can harvest six dollars from a 3-foot row of lettuce. Be sure to mix several kinds of lettuce seeds for super salads.

POURED CONCRETE WALLS MANURE STORAGE (Liquid or Dry) BUILDING CONSTRUCTION OF ANY KIND

Square or Round Walls Built Below or Above Ground

- Aluminum Forming System Using Redi-Mix and Reinforcing Steel
- This gives us flexibility to form a manure storage system to fit your layout.

PRICES QUOTED ON SLOTTED FLOOR MANURE STORAGE SYSTEMS

The new shift to Yanmar.

There's one very simple reason why your new compact Diesel tractor should be Yanmar: we offer you features you can't get from anybody else.

Exclusive Power Shift

The shift is on to Yanmar because Yanmar has the shift—the power shift no other compact diesel tractor offers.

The Yanmar Power Shift lets you shift on the go without clutch and Yanmar's power shift gives you the ease of automatic without the 25 to 30% power loss of hydraulic or hydrostatic type transmissions. You save time. You save effort. Every working hour becomes more productive. More rewarding.

Live PTO (Power take-off)

With a regular PTO your attachment is not driven unless your tractor is moving. That means uneven work until your tractor gets up to operating speed.

Yanmar's 2 speed Live PTO keeps your attachments moving at full power even when your tractor is stopped. You get more consistent work and sure going through the toughest spots.

Diesel Economy

As the world's largest manufacturer of small diesel engines, Yanmar gives you time-tested fuel-saving diesel economy. Smooth, quiet running Yanmar Diesel power means no electrical ignition system to go out of wack, no spark plugs to replace, and about all lower fuel bills.

Versatility

From tilling to plowing to mowing to your garden, there's nothing you can't do with a rugged reliable Yanmar. That's

Dependability

Performance proven in the toughest jobs around the world. Yanmar Tractors are built to last. And last.

Join the new shift to Yanmar and find out what a compact diesel tractor should be.
