

# Daubert's Wind Mill Farm

(Continued from Page A34)

2-year-old, Wind Mill Elegant Roz Her 305 day record came in the 18,930 pounds milk, f% 4.7, and 898 pounds fat, and her 362 day record

was 21,856 pounds milk and 1011 fat. (Roz had to step behind her stablemate, Joan T, for top billing one month after hitting the national magazine's cover.) Her

A.I sire is White Cloud Jason's Elegant, a superior sire.

The Dauberts have high expectations for a cow they purchased two years ago, named Vine Valley Patrick Hatty Sired by Vine Valley Loa Patrick, Hatty has one of, if not the leading production records for Brown Swiss in the state.

Her 305 day record as a 7-year-old was 25,959 pounds milk, f% 4.3, 1112 pounds fat, and her 365 day record showed 29,092 pounds milk, f% 4.3, 1253 pounds fat. She is understandably classified Excellent.

When the Dauberts take their cattle on the show road, they generally come home with top honors. At two consecutive Pennsylvania Farm Shows, they captured the grand champion, premier breeder, and premier exhibitor honors in 1978 and 1979.

In three decades and two generations, the William Daubert family has come a long way — all the way to the top of the Brown Swiss breed

This Wind Mill stablemate, Vine Valley Patrick Hatty, is setting out to make her mark in the state's top Brown Swiss herd. Although she has only called the Schuylkill County farm home for the past two years, Hatty is helping keep its name on the top of the heap with a 365 day record closing in on the 30,000 pound mark with over 1200 pounds fat.

## Useful Centerpieces

The centerpieces on the tables at the banquet of the Grassland FFA Chapter on Friday, March 20, at the Blue Ball Fire Hall came in handy to help pass the time in the interval between the meal and the start of the awards program. Instead of flowers or the like, the centerpieces were farm machinery toys representing various John Deere equipment, ranging from tractors of all sizes to baler and front-end loaders. Quite a few blue-jacketed youths were seen hooking the equipment together, pushing it across a table and even building make-believe barns out of the banquet programs.

## Hallowell says checkoff on hold

CENTERVILLE — During a session with the Atlantic Breeders Cooperative on Wednesday afternoon, Pennsylvania Secretary of Agriculture Penrose Hallowell stated the milk promotion referendum "is on hold."

Hallowell explained the reason the referendum is on hold is because the Federal Order threatened to cease its program if Pennsylvania starts one of its own.

"If that's the case, we'd lose more money than we'd gain," Hallowell said.

He commented that four drafts of the proposed checkoff of three-quarters of one percent from farmers' milk checks have been reviewed to date. The money collected through this program would be used for research and promotion of dairy products.

He added he recently visited representatives of the Federal Milk Order to persuade them to allow Pennsylvania to establish a checkoff in addition to the federal program.—SM

## Why Buy SEALSTOR?

Roomier, cooler, dome-shaped Sealstor roof is strong, lightweight, translucent, fiberglass. Roof panels are larger in order to reduce seam lines and the possibility of leakage.

Sealstor forage distributor packs feed with approximately 15% greater density. You get more capacity without paying for a larger structure.

Glass-fused-to-steel sheets are the industry's largest. Larger sheets combined with closer bolt spacing, provide maximum protection against feed spoilage.

Unloader is massive sweep arm auger. No chains to break, no short arming. Compared to chain type unloaders, service savings may exceed \$1,000 per year. The unloaders offered by Sealstor are rugged, dependable, easy to maintain and service.

Recessed steps are molded into a roof panel. Not added on. You get built-in solidity at the top of a Sealstor structure.

Breather system is up high in the roomy dome. It's easy to see, check and service, and it doesn't take up valuable feed storage space.

Special, smooth, nylon-capped bolts inside the structure close bolt holes tightly and permit the even flow of feed down the structure walls.

The greater density of feed inside a Sealstor is only possible because the bottom unloader is engineered to handle the extra workload.

The longer, stronger Sealstor Warranty.

### Sealstor Warranty

Southwestern Porcelain, Inc. covers every Sealstor structure for two full years (complete details upon request)

## Sealstory

The manufacturer of Sealstor structures Southwestern Porcelain Inc. has been making glass fused to steel products since 1948.

Products turned out by our large modern plant near Tulsa, Oklahoma, have been used to build complete service stations and high rise buildings as well as thousands of top loading, bottom unloading, oxygen limiting feed storage and processing systems for forage and grain crops, and above ground liquid manure structures in a wide range of sizes.

Just as the Sealstor factory and engineering staff is dedicated to providing the modern livestock feeder with the soundest structures and the most advanced features, so is your independent Sealstor dealer dedicated to the superior service and assistance that has made the remarkable acceptance of Sealstor products a reality. We hope you will let us send you additional information about our products and permit us to arrange for you to visit Sealstor farms in your area.

## ONE SIZE DOESN'T FIT ALL.

Why use a big tractor on a job a small tractor can do just as well? And do for less.

Our B Series Kubota tractors range from 12 to 16 hp, have two- or four-wheel drive, and handle a variety of implements. All have a hydraulic 3-point hitch, standard rear PTO, 6 forward and 2 reverse speeds, plus a dependable diesel engine. And one even has hydrostatic transmission.

So if you want to get the job done right, get the right tractor for the job.

We're looking for work.
