

For maximum control in minimum-till corn, you seldom have a second chance. That's why so many successful minimum-till corn producers have added Banvel®* herbicide to their weed control program. Banvel stops tough, late-emerging broadleaf weeds like seedling Canada thistle, morningglory, pigweed and lambsquarter. And Banvel can be tank-mixed with atrazine and 2,4-D for added flexibility.

This season, get maximum control with Banvel. And help get your minimum-till corn off to a healthy headstart over tough broadleaf weeds.
