Angus Assn. names new vice president

Spader takes over this month as the ninth executive vice president of the American Angus Association, the world's largest breed registry headquartered in St. Joseph, Missouri. Spader replaces C.K. Allen as chief administrative officer of the 34,000member national Angus association.

"I intend to improve and expand the Association's existing programs," Spader says, "and am totally optimistic about the future of Angus cattle. As the world's most efficient beef breed, Angus will be in stronger demand in coming years than ever before."

Spader has headed the

ST. JOSEPH, Mo - Dick Association's performance department for the past five years. He joined the national Angus staff in 1969, first as assistant director of public relations, then assistant director of performance programs.

During his management of the performance department, Spader helped initiate the use of estimated breeding values, the Pathfinder Cow Report, the National Sire Evaluation program and the tirst AHIR Field Data Sire Elevation Report.

He was performance director when the Association earned the Beef Improvement Federation's Breed Association of the Year titles in 1976 and 1977.

Conservation

(Continued from Page D11)

across the field unless a grade change would cause the strips to turn downhill too hard, creating perhaps a worse erosion hazard than before. In these cases, the strip would be brought back to contour

Once the strips are staked with alternating rows of colored flags,

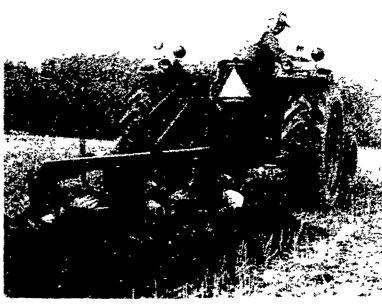

A native of Howard, South Dakota, Spader was raised on a commercial cattle and farm operation. He served three years in the Marine Corp. after high school, then received his bachelor's degree in 1969 from South Dakota State University with an animal science major and journalism

Spader, his wife Sheri and two sons, Jared and Brett, make their home at Rosendale, Missouri.

width strips can be marked off this time to hop aboard the tractor and start turning the lines in. Then every other strip can be plowed, with the end result eventually being hay fields or small grains

separating strips of row crops, like corn or tomatoes.

Voila — the soil is kept from washing away and run off is slowed to prevent erosion and allow the rain to soak into the land. Your recipe for conservation stripcropping is complete.

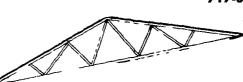

Knowing you're doing something to help save the soil will put a smile on your face as you watch those conserving curves turn a drab field into one of beneficial beauty.
