

CHORE-TIME®

The Air System with A Mind Of Its Own

Until now, most ventilation systems had one drawback. Air inlets had to be opened and closed by hand.

This was time consuming — and pretty much a matter of guesswork.

Now, Chore-Time has eliminated this problem.

The Chore-Time system has a mind of its own and adjusts inlets — in conjunction

with fan operation — to maintain air pressure at a constant, preset level.

This provides a degree of air and moisture accuracy never before possible in poultry and livestock buildings.

The new inlet control (pictured) is just one of many exclusive features that make Chore-Time air systems number one in performance and reliability.

Four basic components go into the makeup of this ventilation system: the fan, the inlet, the air inlet power pack, and the controls. Coordinated, these four basic components can provide you with better conversion and performance by removing stresses due to lack of oxygen, excess humidity, noxious gases and temperature extremes.

Reliability through simplicity. Chore-Time's advanced air system provides automatic control of incoming fresh air, moisture and heat for productive environmental control in agricultural buildings.

AUTOMATIC HOOD FAN

ventilation...

Keep animals comfortable, and you keep them far more thrifty and far more profitable. Chore-Time's Advanced Air Systems approach combines controlled air inlets with the finest variable speed and single speed fans and other components. They're fitted to your specific building. The result is year-around, day-in and day-out comfort for your animals.

NY-NJ MMA gives dairy promotion plan approval

NEW YORK, N.Y. — A plan whereby dairy farmers contribute money for milk promotion activities of the American Dairy Association and Dairy Council, Inc., was approved last week by Thomas A. Wilson, Market Administrator, New York-New Jersey Milk Marketing Area.

These milk promotion activities include advertising, nutrition education, publicity for dairy products, marketing and product research, and informational services.

Noting that New York and New Jersey have mandatory milk promotion plans, the Market Administrator stated no dairy farmer will be subject to deduction under this program if making mandatory contributions under a state plan.

Wilson said last week's action allows handlers regulated by the marketing orders to send "positive letters" to their dairy farmer suppliers. Dairy farmers who receive a letter will be considered to approve for one year deductions of eight cents per hundredweight from their monthly milk checks,

unless they notify their handlers in writing that no deduction should be made.

Moneys deducted from payments for milk delivered on or after June 1, 1981, will be paid directly by the handler to the American Dairy Association and Dairy Council, Inc.

The Market Administrator explained participation is voluntary for both handlers and producers, and a participating producer may have deductions stopped at any time by notifying the handler. A producer who does not want to participate and who receives no letter need not notify the handler since no deductions will be made.

In approving the plan for the coming year, Wilson pointed out that there has been no substantial opposition to the use of the positive letter procedure by producers.

Use of the positive letter approach was requested by DairyLea Cooperative Inc., Eastern Milk Producers Cooperative Association, Inc., and Northeast Dairy Cooperative Federation, Inc.

PGC warns against utility equipment damage

HARRISBURG — The Game Commission again in appealing to shooters to handle firearms safety and sensibly to protect lives and save property.

Each spring, as soon as schools close, there is a sharp upturn in shooting damage. Public utility equipment is a favorite target.

Much of the damage to utility lines, transformers, insulators, relays, etc., can be traced to youths using firearms carelessly. Most shooting incidents are deliberate, and annual property losses run into hundreds of thousands of dollars in the state.

Evidence of misdirected target practice by youths during summer vacations has prompted law enforcement agencies to add special emphasis in their program to impress upon teenagers and parents the importance of handling and using firearms properly to save lives, reduce injuries and protect private property.

Severe penalties can be imposed upon shooters who indiscriminately damage property or endanger others through deliberate or careless misuse of firearms.

YOUR MILK QUALITY GUARDIAN...

MUELLER
HiPerForm

Mueller HiPerForm® is the completely automatic milk cooling system for progressive dairymen. Durable HiPer-Form Model "OH" and "MHL" Milk Coolers feature large-radius corners and smooth stainless steel welds for easy cleaning. Cooler capacities range from 300 to 6000 gallons. With the flip of a switch, Mueller-Matic® Automatic Washing System cleans the cooler interior with jet-spray wash and acidified rinse.

Ask us for details on HiPerForm milk coolers.
