## PASTURE NUTRIENT BALANCER

As you know good pasture provides an excellent source of protein during the spring and summer months. In fact, lush green pasture may be as rich in protein, on a dry basis, as corn gluten feed or brewers' dried grain. Occasionally, some persons become so enthusiastic about the nutritive merits of pasture that they conclude it is fully the equivalent of a protein-rich concentrate. This is a considerable exaggeration.

In two important respects the best of pasture differs decidedly from a high-grade concentrate ration. This is in the percentage of fiber (fiber is undigestible and has no feed value) and consequently in the TDN or net energy. Lush pasture will usually contain 18 to 20 percent fiber compared to approximately two percent fiber in ground corn (when both are dried to the same dry matter content.) Since it is impossible to balance rations for grazing animals, energy, vitamins and minerals should always be made available. To insure that the animals nutrient requirements are met during these upcoming months, we recommend that you consider MOPRO 16% Liquid Protein fed free choice.

MOPRO 16% Liquid Protein is a High Energy Feed which has been specifically designed to economically carry more cattle per acre while increasing gains on pasture without grain. Our stable guaranteed vitamin and mineral package has proven helpful in the prevention of pinkeye, thrush, and ringworm while improving general herd health and conception rates. Good pasture along with MOPRO 16% Liquid Protein supplies the most economical feeding program for grazing animals during the growing season.
