

## Trees are excellent windbreaks

LANCASTER — Windbreaks are created to control the effects of surface winds. "When planted across the direction of prevailing winds, they control drifting snow, conserve moisture, and protect crops, livestock, orchards, roads, and buildings", reports Charles Worrilow, Soil Conservationist in Chambersburg's office of the Soil Conservation Service.

"Windbreaks also beautify the area and provide valuable wildlife food and cover. Actual tests with two-story frame houses have shown that windbreaks offering

protection from northerly and westerly winds can reduce fuel consumption by as much as 32 percent," says Worrilow.

Windbreaks may be single or multiple-row design, depending on the amount of space available. The height of the windbreak determines the distance of control on the leeward side. Effective control is usually obtained for a distance of 10-20 times the windbreak height.

For further information, contact the Soil Conservation Service office nearest you.

# MADISON®

## Nutri-Matic® and Grain-O-Matic®

### Proven feed processing systems from the concrete leader

Feed quality is at its peak on the day you harvest. The best way to preserve that quality until you're ready to feed is with Madison Nutri-Matic and Grain-O-Matic.

**Madison Nutri-Matic for medium-moisture haylage.** The concrete leader for first-in, first-out push-button feeding-with the unbeatable Nutri-Matic bottom unloader, roomy service tunnel, molded fiberglass roof, exclusive Vibra-Cor® staves...and much more.

**Madison Grain-O-Matic for high moisture grain.** Features the industry's leading high-moisture grain bottom unloader, plus famous Madison quality throughout. Compare all the advantages. Send coupon today.

#### Madison "System of Choice."

The logical concrete structure for every feed you grow. The leader...Madison silos for corn silage. Madison Nutri-Matic and Grain-O-Matic for haylage and high-moisture grain. Save money. No need to overstructure.
