Announcing the new...

MUELLER Refrigerated Receiver

Now, modern dairymen can pre-cool their milk before it passes thru the milk pump without any "additional" milk handling equipment

The Refrigerated Receiver utilizes Mueller Temp Plate, the same efficient heat transfer surface used in more than 70,000 Mueller Milk Coolers around the world

- * **FEATURES:** All stainless steel construction, compact design, very little larger than an ordinary receiver, removable top for internal inspection, and washes automatically with the pipeline wash system
- * **SPECIFICATIONS:** Dimensions 18" diameter, 28" high 2" milk inlet and vacuum connections, 1 1/2" milk outlet, 3/8" refrigerant inlet, 1/4" refrigerant outlet
- * **INSTALLATION REQUIREMENTS:** The Mueller Refrigerated Receiver may be used with a 3, 4 or 5 hp condensing unit, either conventional or Mueller HiPerForm. Note: If the HiPerForm is selected, the unit must be modified for pump down operation — consult your Mueller representative. Tests have shown that the Mueller Refrigerated Receiver can be thoroughly cleaned by an automatic pipeline washing system. It is important, however, that the dairyman ensures that an adequate amount of hot water is provided for washing. It is suggested a Mueller Fre-Heater be used to ensure an adequate supply of hot water.
- * **PERFORMANCE:** Performance of the Refrigerated Receiver will vary somewhat, depending on the milking system arrangement and milking practices

What does the Refrigerated Receiver do for the dairyman? — Basically, it cools milk to 55° or below in the Receiver before it is pumped — but it does much more than that:

1. The faster cooling retards the growth of bacteria.
 2. There is no agitation of warm milk.
 3. It promotes conditions which may result in higher butter fat counts.
 4. It enhances the overall quality of milk.
 5. It will improve cooling efficiency — with the pre-cooler, you can actually cool milk for less power cost than in the bulk cooler itself.
- Why use a Mueller Refrigerated Receiver? —
1. It offers faster cooling — It saves energy — It gives you a better product.
 2. You can increase profits with lower bacteria counts and the potential for higher butter fat counts.
 3. The milk produced on your farm will have long shelf life.
 4. The Mueller Refrigerated Receiver is the most economical way to pre-cool milk.
 5. More cows can be milked at a faster rate without any added strain on the milk cooling.
 6. Ease in cleaning.
- It just makes good sense that the Mueller Cooler people would produce the very finest pre-cooling equipment.
