

# Kids' KOrner

Okay, kids, now we're going to see how familiar you are with farming in Pennsylvania. The following puzzle is the name of someone very close to farming throughout the state. In fact, we'll give you two chances at his name.

If you know him, you might call him:

And if you're more formal:

## Keep your pets cool this summer

NEWARK, Del. — Hot weather can be difficult for dogs and cats. To avoid sunburn and, more seriously, heat stroke, give your pet a cool, shady spot and plenty of fresh water says University of Delaware veterinarian Dr. Paul Meckley.

Exercise your pet in the early morning or the evening rather than at mid-day. Hot sidewalks can burn a pet's footpads, and too much exercise when it's hot can put a strain on the pet's ability to get rid of excess body heat.

Confining a pet in a parked car can be very dangerous, but if you must do it, make sure you're parked in the shade and open all windows as far as you can without permitting the animal's escape. Even with these precautions it is necessary to check the animal every few minutes for signs of heat distress.

The worst heat-related problem that could befall your pet is heat

stroke, which can be fatal if not treated immediately by a veterinarian. Signs include panting and salivating, a rapid pulse rate, a wide-eyed, anxious expression, fever, vomiting, and dizziness or fainting.

If your pet seems to be suffering from heat stroke, get him into the shade and spray him or immerse him up to his neck in cool — not ice cold — water. Also massage him to keep up circulation. Contact the veterinarian immediately for further instructions.

Meckley says it is not a good idea to give a dog or cat a shorter-than-normal summertime haircut, since an animal's coat insulates against the heat as well as the cold. Animals normally shed during hot weather, so regular brushing keep the animal well groomed and also helps you spot fleas and ticks.

Keep your animals comfortable and healthy this summer by paying attention to their special summertime needs.

## COLOR THIS!

- |           |               |
|-----------|---------------|
| 1. PINK   | 6. ORANGE     |
| 2. RED    | 7. GREEN      |
| 3. YELLOW | 8. LT. BROWN  |
| 4. BLUE   | 9. PEACH      |
| 5. BROWN  | 10. LT. GREEN |

HONEYBEES LIVE IN LARGE GROUPS. THERE ARE AT LEAST 75,000 IN ONE HIVE. PEOPLE HAVE BEEN EATING HONEY FOR THOUSANDS OF YEARS. THERE WAS HONEY BEFORE SUGAR. THE BEES MAKE HONEY FROM NECTAR, THE SWEET JUICE FOUND IN FLOWERS. MOST OF THE BEES IN THE HIVE ARE FEMALE WORKERS. HONEYCOMBS ARE BUILT OUT OF WAX FROM THEIR BODIES. THE MANY CELLS ARE USED FOR STORING EGGS OR HONEY.
