

MILK MARKET NEWS

FEDERAL ORDER NO. 2 NEW YORK — NEW JERSEY

June price remains \$12.83
Producers who delivered milk during June 1981 to handlers were paid on the basis of \$12.83 per cwt., unchanged from the previous month and 91 cents higher than June 1980's uniform price.

According to a recent Order No. 2 market bulletin, a total of 964.6 million pounds, an increase of 23.3 million pounds from last year, was received from 17,512 producers.

Although Class I usage was up almost 4 million pounds to 358.5 million pounds, the utilization percentage was only 37.2, 0.5 points below June 1980.

June was the last takeout month

of 1981's seasonal incentive plan. A total of \$3,858,328.70 was removed, bringing this year's total to \$12,829,421.28, an increase of \$459,227.26 from 1980. This money, plus the interest earned, will be returned in the August through November pools.

FEDERAL ORDER NO. 4 MIDDLE ATLANTIC

Base price drops two cents
The June 1981 base milk price was \$13.89 per cwt. and the excess milk price \$12.37.

The weighted average price was \$13.86 per cwt., and butterfat differential for the month was 17 cents.

The base milk declined two cents

from May while the weighted average was up three cents. The gross value of pooled milk was \$68.0 million in June compared to \$59.9 million a year ago.

A recent Order No. 4 bulletin reports that producer receipts totaled 491.8 million pounds during June, a sharp drop of 5.6 percent from May, on a daily basis. Milk production this June was up over 29 million pounds or 6.3 percent from a year ago. Class I producer milk totaled 223.6 million pounds and accounted for 45.47 percent of total receipts.

A year ago, Class I producer milk totaled 219.2 million pounds and 47.39 percent of total receipts. Base milk accounted for 89.36 percent of total monthly production. There were 7,497 producers supplying pool handlers during the month, an increase of 171 from last June.

The average daily delivery per producer was 2,187 pounds in June, a drop of 136 pounds from May, but 82 pounds or 3.9 percent above last year.

Middle Atlantic order pool handlers reported Class I in-area

milk disposition on 190.0 million pounds during June, a drop of 1.9 percent from a year earlier, after adjustment to eliminate variation due to calendar composition.

New base period begins August 1

The Order No. 4 base-excess plan provides that each producer establish a new base each year.

The 5-month period of August through December is the base-forming period, and this base is effective for the following 12-month period of March through February inclusive.

Bases established during August-December 1981 will be used in determining each producer's base and excess milk deliveries during the period March 1982 through February 1983.

Bases are computed and announced no later than February 25 each year. The base is calculated by dividing the total pounds of milk a producer delivers to pool handlers during the August-December period by the number of production days.

The minimum number of days

used in computing bases is 120. A producer who fails to deliver milk during the base-forming period at least on a 120 days basis, has his base computed as though deliveries made represented 120 days' production.

New producers entering the market who made no qualifying milk deliveries during the base-forming period, or, producers who wish to relinquish their established bases (by written notification to the Market Administrator) shall have a base reflecting a percentage of their deliveries.

August Class I price decreases
The Order No. 4 Class I milk price for August 1981 is \$15.37 per cwt. for milk testing 3.5 percent butterfat. This price is down two cents from July and is 91 cents higher than last August's Class I price.

The \$15.37 price is based on the June 1981 Minnesota-Wisconsin manufacturing milk price of \$12.59 per cwt., adjusted to a 3.5 percent butterfat content, plus a \$2.78 Class I differential.

CCC corn sales total 221,814 bushels

WASHINGTON, D.C. — The Commodity Credit Corporation accepted seven bids last week on a total of 221,814 bushels of corn offered from the 199 million bushels in CCC's uncommitted inventory, according to Everett Rank, CCC Executive Vice President. Three hundred seventy-six bids were rejected on a total of

33,377,742 bushels, he said.

Most of his corn was purchased by CCC as a result of the 1980 Soviet grain embargo.

The average price received was \$3.60 per bushel (basis #2 yellow corn). This price is above the national average minimum sales price of \$3.13 per bushel.
