Ayrshire breeders

(Continued from Page A15)

winner was Matthew Edwards. In the woman's there was a tie between Sue Kulp and Elsie Wolff. And in the men's division, the winner was Earl Keefer.
With the exception of Ardrossen

Farms, Villanova, the Conebella Farm is probably the oldest Ayrshire dairy farm in the state.

Started in the 30's by Charles Gable's father, C. Harold Gable, the operation has grown to its present size. The farm has 198 acres planted mainly in corn and alfalfa.

Conebella Farms has received 23 consecutive breeder awards and has developed 36 cows with over 100,000 pounds of milk, and six of these exceeded 150,000 pounds.

The current DHIA rolling herd average on 61 cows is 13,995 pounds of milk and 596 pounds of fat, with a 4.3 percent test.

On July 27, 1981, nine animals in the herd scored 90 points or better with an official average of 81 points. Conebella Ora Renee scored 94 points.

The free stall heifer barn was built in 1972 and the main barn remodeled in 1980. The main barn is a stall barn equipped with pipeline milkers. The managers are flush with the feed alley and finished with glazed tile.

The managers in the heifer barn are also lined with glazed tile. The 8-feet-wide service alleys are maintained with a barn cleaner. Ventilation provided by four fans was more than adequate and even though all the doors were open a fly was hard to find.

President Keefer made his remarks after lunch after a fine rendition of popular and gospel songs by The Goodwill Barbershop Quartet, a local group.

Keefer said the dairy business was headed for a period of challenge and uncertainty. The population will increase by 1% over the next five years but there will be a greater percentage of senior citizens-low consumers of milk-and a smaller percentage of

less not more milk consumption per capita.

In 1974 milk was the number one beverage in this country. Today it ranks fourth behind soft drinks, coffee, and beer. The dairy in-dustry invested 21 million dollars in advertising this past year while soft drinks invested 181 million and beer 225 million dollars.

While milk demand is falling he said, milk production is increasing 2½ times faster than cow numbers are decreasing.

"We, today, are not producing for the market place, but for the government". The alternatives for the dairyman he stated is to cull cows, take a close look at the bottom 5 to 7 percent of your herd, step up advertising by from 50 to 100 percent, reduce your debt load to lessen the pressure for poorer quality and higher production.

For the Ayrshire cow to compete successfully in the future it must become larger with good feet and legs, and have an improved ability to convert more milk from larger amounts of roughage and less

Smaller cows which are profitable now will not be able to compete in the future. The export of feed grains and the production of alcohol from corn will make cheap feed a thing of the past.

Doug Dodds, Executive Secretary for the association told the group that, while he didn't have a crystal ball, he felt that cows close to production age would bring a good price in the fall, there would be a soft market for heifers with some time to go. He also mentioned that the forced sale of an Ayrshire herd in Wisconsin averaged \$2530 per cow.

Milton Brubaker gave out 41 production awards for the association. 30 were the individual cows and 11 were herd awards. Mielke Heinz for Ardrossan Farms collected 21 certificates.

One of the awards was for top herd in the state which produced an average of 16,784 pounds of milk with 687 pounds of butterfat and a 4 people under 19 years of age. percent test, for the 119-cow Therefore the trend will be toward operation at the Villanova farm.

USDA quarantines to contain Fla. medfly outbreak

Department of Agriculture has established emergency regulations to restrict movement of 81 kinds of produce and plants from the Tampa, Florida, area to prevent the spread of Mediterranean fruit flies.

According to Assistant Secretary of Agriculture C.W. McMillan, the regulated produce and plants can serve as Medfly hosts.

The quarantined area includes a 48-square-mile area in Hillsborough County, centered in the Ybor City section of Tampa. The area is bounded on the north by Hillsborough Ave. (U.S. Rt. 92), on the east by Williams Road, on the south by a line ½ mile north of state route 676A and on the west by Nebraska Ave.

McMillan said a public hearing to receive comment on the action will be held September 15, at 10 a.m. in the Ybor Room, Curtis Hixon Convention Hall, 600 Ashley Drive, in Tampa.

"This quarantine action, coupled with a parallel action by the Florida Department of Agriculture and Consumer Services, is designed to contain the Florida

WASHINGTON, D.C. — The U.S. outbreak while we work with the state to eliminate it," said Greg Rohwer of USDA's Animal and Plant Health Inspection Service. "Previous outbreaks of the pest in Florida in 1929, 1956, 1962 and 1963 were all elimiated."

Regulated items include tomatoes, peppers, apples. apricots, avocados, some kinds of oranges and lemons, cherries, grapes, grapefruit, mangoes. peaches, pears, and many other kinds of fruits, vegetables, nuts and ornamentals.

"These regulations were mad necessary by the trapping of thre-Medflies in a trip in Ybor City and another approximately 1½ mile. away," said Rohwer.

Today's action became effective as soon as it was signed by agenc officials because of the emergency nature of the infestation.

The public is invited to testify a the hearing or send writter comments, until October 13, to Regulatory Support Staff, PPC, APHIS, USDA, Federal Building, Hyattsville, Md., 20782.

Details of the action appear **: the August 14 Federal Register.
