

# PURINA<sup>®</sup> NUTRI-CYCLE<sup>®</sup>

## SYSTEM OF POULTRY FEEDING

A unique, patented feeding plan that temporarily uses the hen's body stores of protein and other nutrients for egg production. A specially-designed, lower fortified Nutri-Cycle (NTC) ration is fed 4 days after the hen is 40 to 45 weeks of age. She uses her body stores plus nutrients in the NTC ration to continue laying at a normal rate. Then her stores are replenished by feeding a regular Bio Layena<sup>®</sup> ration for 12 days. The cycle is repeated. Subsequent production remains normal, but feed costs are reduced.

### Nutri-Cycle<sup>®</sup> Feeding Program:

- ★ Lowers cost of production
- ★ Improves feed efficiency
- ★ Increases saleable eggs

For more details about the Nutri-Cycle system of feeding poultry ask your Purina salesman or dealer, or request Purina Nutri-Cycle System of Poultry Feeding (P2686) from Purina.
