Dairy Business

(Continued from Page D19)

Spreading the problems.
Bacteria can spread from cow to cow in many ways. Any time you touch an infected cow, your hands are contaminated and become carriers of infection. Remember that when you milk, wash, strip or treat a cow.

Our human problem is that we can't see the little 'bugs' that cause the problem. We know they are there, but — well — even a rinse and a flush won't carry them all away. There are still plenty left after dipping the teat cups in chlorine.

Best thing to avoid spreading them is to milk clean, uninfected cows first. There's not much chance of carrying a germ from a cow that's clean.

Use only individual paper towels to wash each cow, and discard them immediately. Don't dip back into the sanitized towel bucket for another wipe. Use a clean one if you need a second wipe.

The cost? What is a clean healthy udder worth? Certainly more than a few cents.

These are only a few of the things that I've observed our top dairymen doing to prevent mastitis. They are the most obvious — you know them.

I'm sure there are some less obvious practices that contribute to a low SCC count and a high herd average, but look closely at your own situation and you may see even the obvious can be overlooked.

PGC seeks marked ducks

HARRISBURG — Biologists for the Maine Department of Inland Fisheries and Wildlife have asked the cooperation of Pennsylvania in locating web-tagged ducks.

This year hooded mergansers, wood ducks and goldeneyes were tagged on the Brownfield Wildlife Management Area. The birds may be taken by waterfowl hunters or found by others in the Keystone State, and the Maine wildlife managers would like to hear if any are recovered here.

The tags are fingerling fish tags of monel, bearing the letters ME plus a number. They may be in any part of the bird's foot. Recovering ducks is a game the Division of Wildlife Management, Game Commission, P.O. Box 1507, Harrisburg, PA 17120.

Dairy Automation

If You're Thinking Dairy Automation There's Just One Name You Need To Know: De Laval

For over 100 years dairymen world-wide have depended on De Laval products to keep their dairies running smoothly and profitably. You can too. Check these De Laval automation products, all designed to make your milking easier. Then check with us. We've got full details on these fine products and the whole De Laval milking equipment & accessories.

3000 Series rugged milker features vacuum levels and automatic removal.

MS Series Automatic Removal milker features parallel linkage support and "Arms" also available.

Autocord™ milking device — the affordable way to automate milking.

Challenger™ Feeding System

This is the breakthrough technology that made it possible to feed grain to dairy cows according to individual needs — automatically. The De Laval® Challenger™ Feeding System is the obvious choice for dairy farmers who want electronic grain dispensing at a moderate installation cost.

The Challenger system is controlled by transponders which store feed requirements for each cow; these are used in feeding stalls where cows are milked. The Challenger system has been demanded by the most modern operations, yet it's feasible for herds as small as 25 cows. Why we show the surprising features?

Come in today and order your 78 Vacuum Supplier. We'll tell you how to receive a rebate of \$100 and a free Servo Vacuum Controller — total retail value of \$270.
