

For every foxtail you see this fall you could see 3150 next spring.

The 2 to 4 weeks longer control of Dual helps prevent harvest-time grasses.

Ever count the number of foxtails in a field? A single plant can produce 3150 new plants a year. And since up to 90% of foxtails survive the spring frost, you could see 3150 new foxtails in the spring for every one you see in the fall. A very encouraging statistic for a foxtail control solution. Switch to Dual.

Dual lasts 2 to 4 weeks longer than other corn-soybean herbicides. It gives you extra weeks of control. Corn stays green, soybeans yellow and set. And you end up with clean corn and soybean straw.

We can show you test results that prove Dual lasts longer than other herbicides down the road. In a field, ask the farmer not ask him why he's using Dual. After all, the man who has used Dual is our best salesman.

Dual for control that lasts 2 to 4 weeks longer.

Dual 6 ways better.
