

USDA delays grain rule

WASHINGTON, D.C. — A rule that all export shipments of bulk U.S. grain in trucks and railcars and domestic shipments of bulk grain in barges be officially sampled by a diverter-type mechanical sampler will not become effective Jan. 1 as planned, a U.S. Department of Agricultural official said.

Kenneth A. Gilles,

administrator of USDA's Federal Grain Inspection Service, said the delay until Jan. 1, 1983, is needed to allow the use of alternative approved sampling methods for domestic shipments of bulk grain in barges and all grain exported in these types of carriers.

"This delay will permit grain industry people the option of having official in-

spection of grain in trucks, railcars and barges with either the diverter-type sampler or other approved sampling methods, while the agency reviews this requirement." Gilles

said.

Rules under the U.S. Grain Standards Act already require that grain going to export in ships must be officially sampled by an approved diverter-type sampler.

Notice of the delay

was published in the Dec. 1 Federal Register.

Comments should be sent to: Regulations and Directives Management, rm. 1636-South, FGIS, USDA, Washington, D.C. 20250. Phone 202/447-8616.

Grain advisory committee holds first meeting

WASHINGTON, D.C. — Members of the U.S.

Department of Agriculture's Federal Grain Inspection Service advisory committee reviewed background information on the agency's recent reorganization, user fees, unofficial services and intermarket grade differences at the committee's first meeting Nov. 13.

The committee will meet again Jan. 27.

C.W. McMillan,

assistant secretary of agriculture for marketing and inspection services, said the 12-member committee's purpose is to advise USDA on the efficient and economical implementation of the U.S. Grain Standards Act. McMillan is committee chairman and Kenneth A. Gilles, administrator of the agency, is vice chairman.

PGC stresses the importance of deer tags

HARRISBURG — Successful deer hunters in Pennsylvania are being urged to make sure their deer tags are properly filled out and attached to the head of the animal.

Not only is the deer tag required by law, but the information recorded on the tag is also of critical importance in the management of the deer herd, according to Game Commission Field Research Coordinator Steve Liscinsky.

"Many deer heads are examined by trained personnel to obtain information on sex, age and county of kill — data that are absolutely essential in computing populations and regulating harvests," Liscinsky says.

"Some of these deer are examined at camps and processing plants in the absence of the owner of the deer," he points out. "And if the county of kill is not readable on the tag, the other information is useless."

Liscinsky goes on to point out The Game Law requires that "the deer tag shall remain attached to the head of the deer" until the head is destroyed, disposed of or delivered to a taxidermist. If the antlers are removed from the head of a buck, or if the head is separated from the carcass, as often happens in meat processing plants, the tag is not to be transferred to the antlers or to the carcass.

It is suggested that a duplicate tag, containing all of the information found on the original tag, should be made out and attached to the antlers and/or carcass, if necessary.

If the deer has not been processed "in the field" by an examining team (a heart-shaped hole is punched in the tag if it has been), the successful hunter can make a valuable contribution to his or her sport by sending one lower jawbone to the Game Commission, according to Liscinsky.

Only that portion of the jawbone which contains the deer's back (molar) teeth is necessary to determine the whitetail's age. The

jawbone, which can be cut in front of and behind the molars, should have the excess flesh removed, be permitted to air-dry for several days before shipping, and be wrapped in newspaper, rather than in plastic, foil or cellophane.

A sturdy envelope should be used, and the

words "DEER JAW" should be written on the envelope, which should be addressed to Pennsylvania Game Commission, P.O. Box 1567, Harrisburg, PA 17120. A note should be sent along with the jawbone, listing the county in which the deer was harvested and the animal's sex.

HOLSTEINS AT AUCTION KINGLEA PRODUCTION SALE

At the farm located on Maryland's Eastern Shore, south of Church Hill, 10 miles south of Chestertown and 9 miles north of Centerville, in Queen Anne's Co., Md. Turn west on Clopper Hill Rd. off Route 213 at the Drive-in - farm is 1 1/2 miles on left.
