The Van Dale® story

In 1950, Van Dale developed a rotating auger silo-unloader, the first workable unloader to be made commercially available. We thought we had a good idea at the time; since then, history has proven this to be true. In the years following, Van Dale expanded their silo unloader line, developed a line of feeders and conveyors, added a line of waste management products, and added a mixer/feeder line. Van Dale now has over 20 individual products divided into three product lines; the Farmstead line, the Mixer/Feeder line and the Waste Management line.

There's no question Van Dale has grown considerably since the time we developed the first silo unloader. But even with our success as a company, we pride ourselves on providing innovative leadership to the industry. We pride ourselves on producing a lasting, quality product that meets a specific need. It comes from providing a solution that makes the farmer's job easier and more profitable.
