

### 3 ag preserves eyed

LANCASTER — More than 31,000 acres on 350 farms are tentatively proposed to be included in the first farmland preserves by the Lancaster County Agricultural Preserve Board.

Three tracts which will receive the initial attention of the board include 9,382 acres in Earl and southwest Ephrata Townships; 13,866 acres in Conoy, East Donegal and West Donegal Townships; and 8,039 acres in Elizabeth, Warwick, Clay and northwest Ephrata Townships.

The board expects to hold hearings by September at which farmers located in or near the areas can suggest additions or deletions to the preserves.

Final implementation of the preserve plan must await passage of a state law permitting counties to grant tax write-offs or levy taxes to support farmland preservation.

The Preserve Board is discussing various forms of payments to farmers in the proposed preserves, including \$250 an acre. Purchase of development rights would cover a 25-year period.

**“Almost all cows have worms. That’s why worming our 18,000 lb herd with TBZ has proved really profitable...”**

*says Donald Bare, Lancaster, PA*

Don Bare milks 60 registered Holsteins at Double Springs Farm in Lancaster, and worms each one with TBZ before she freshens.

“High producers need worming as much, or more than, average cows,” says Don Bare. “A cow that’s capable of doing 80 to 100 pounds a day after freshening is going to be under an awful lot of stress. And if she’s stressed by worms, too, there’s not much chance she’ll give you that kind of production.”

“We proved it on our milking line. We didn’t know what some of our cows could really do until we began worming with TBZ® before they freshened.”

“Amazing heifers...”

“Our first-calf heifers were coming in from 14,000 to 16,000 lb before we began worming. Now many

of our heifers are doing 18,000 and up. People are amazed when we tell them how much they milk. Worming doesn’t do it all, of course, but we’re sure it helps.”

“TBZ...simple program”

“TBZ gives us the simplest worming program on the market. We worm just one time per lactation - before freshening. We just put pellets with TBZ in front of them, on the grain, and they eat it right up.”

“All in all, TBZ has proved really profitable.”

“Our records show it pays off.” Your dealer, feed supplier, and veterinarian have TBZ in a feed or dosage form that fits your management. Start your prefreshening worming program with TBZ now.

TBZ (thiabendazole) is a registered trademark of Merck & Co Inc.
