

Now is the Time

(Continued from Page A10)

They attach to, and feed on the blood of dogs, humans as well as many other animals.

There are two common kinds of ticks, the American dog tick and the brown dog tick. Both are brown, but the American dog tick has a mottled white shield on its back. The brown dog tick is a household pest and cannot survive our winter outdoors.

To control the American dog tick, first clean the area of tall

grass and weeds on which the ticks await their victims. Also treat bushes 20 to 30 feet on either side of paths with either Sevin, Dazinon or Lindane. The dog should also be treated with a 5% Sevin dust at weekly intervals or as needed for control of either the American dog tick or the brown dog tick.

To Check Water Supplies

Water is one of our most important resources, but it should be checked periodically. Many families depend on wells for their water supply. But they pay little attention to the water unless the pump fails or the well runs dry. Your water should be tested periodically to determine its quality.

It is important to test water following any reconstruction or addition to the water supply or its

distribution system. Then the system should be checked once a year for continued safety. Water supplies should be checked whenever a disease occurs that may have been caused by unsafe drinking water. If water changes in taste, odor or appearance for no apparent reason, it should be tested.

There are many tests and analyses that can be used. Two of the most important tests for well water are nitrates and bacteria.

Livestock market and auction news

Lancaster Feeder Cattle

Friday, May 21

Report supplied by USDA

Today	295
Last Friday	882
Last Year	249
