Brockett's Ag Advice

By John E. Brockett Farm Management Agent

Lewistown Extension Office

Manage your future

Calves and heifers are the future of any dairy farmer's business. Unfortunately many dairy producers relegate them to the back burner because they are not demanding time like the insects visibly eating crops, and they are not returning any immediate cash

We can't afford to treat such a valuable resource so shabbily If you had a one thousand dollar bill, you'd treat it with respect If you had a 2-ounce gold coin, it would be kept in a place of safety That heifer pushed out on the back 40 is worth more than either one of those items

I don't know how to get the point across to you on how important it is to properly care for those animals. I'm a bit like the little boy in kindergarten. His teacher asked the class to give her examples of things shaped like a cube. Each child named an item such as a box, an ice cube, etc. Finally the next to last child said. a half pound of butter.

Then it was Johnny's turn. His imagination just was not working until suddenly he got an inspiration. His answer was the other half of that pound of butter.

I have written news letters and news columns on this subject for years I still see far too many ill-treated, thousand-dollar assets called heifers I had about given up on the subject until I read the following quote from Marshal both. There are no hopeless situations, there are only people who have grown hopeless about them.

Then I read a quote by Konrad Adenauer The good Lord set definite limits on man's wisdom, but set no limits on his stupidity—and that's just not fair'" So I decided to try once more

Heifer housing

Heifers need some protection from weather extremes Other than that, they can shift fairly well for themselves if they are properly fed, can fight the insects, and have ample water available

Heifer feed

Contrary to usual opinion, heifers require good quality feed Low quality or heifer hay may be no bargain except as a heat producer during very cold weather. This low quality forage will probably cost the dairy producer more grain to grow the heifers. Pasture is an excellent way to grow heifers economically if

- it is supplemented with other good feed during most of the pasture season
- they have salt and possibly immerals while on pasture
- the dairyman treats them for parasites (worms and flies) and

- they have ample water Heifer health

Heifers don't need much but what they do need is exercise, observation, adequate feed, quality forage, parasite control, and the dairy producer's attention

Good heifer management is just plain common cents" They represent future dollars
