The satisfaction that comes from doing a good job of farming

Liming is one of the most important factors in keeping your soil in the highest productive range. A good pasture with a pH of 6.5 or higher, for example, will make 300 to 400 lbs of beef per acre and produce up to \$100 gross income per acre. This means with the help of lime, profits from pastures can compare favorably with feed or grain crops.

For feed & weed applications ...nothing works like URAN.

It's the extra margin of quality URAN has over other nitrogen solutions. Features like low free ammonia and a near neutral pH. They assure a better feed & weed application. Better compatibility with most herbicides. And often better herbicide performance - especially under dry weather conditions.

A URAN feed & weed application gets two important jobs done in one money-saving trip. It not only saves time, fuel, manpower and equipment, but means one less soil-compacting trip over your field.

URAN has no pressure or volatile ammonia to worry about. It can be sprayed, dribbled, flown on soil or crop residues, injected subsurface or applied through irrigation water. And it gives you both fast-acting and long-lasting nitrogen response.

Don't accept imitations. See us for the real thing - genuine Golden URAN.
