with Eradicane at planting time. However, in other fields such as small grains, when the growth of Johnsongrass reaches 2½ to 3 feet...in the boot stage...the plants may be sprayed with Roundup for good control. These plants are very heavy seed producers; a few plants allowed to go to seed this fall will mean hundreds of plants next summer. Johnsongrass is fast growing and will crowd out most farm crops. We urge land owners to make every effort to eliminate all plants from their farm.
