

Here's proof DAIRY-TRONIC Computerized Feeding System has paid for itself for

SPRING LAWN FARM

**Dave, Joe and Fred Garber
Rt. 6, Lancaster, PA**

Comments from the Garber brothers on the value of the DAIRY-TRONIC System:

- Just in feed savings the computer will about pay for itself in 1 year.
- We installed 5 feeders for the milk cows and one for the dry cows. The dry cows are freshening in better condition.
- This will help cows come closer to milking their genetic potential. If you don't feed cows according to production, you don't get production. It's that simple!
- The feedsystem allows us to control feed intake. The computer gives us the opportunity to be better managers.
- We have already been able to save at least one cow from dying by spotting on the printout she didn't eat her full ration of feed.
- We look at the tape every afternoon before milking. The cows that have stars (alarm cows) we check them out when we milk; temperature & mastitis
- The unit is very easy to operate, we spend 5-10 minutes a day making feeding adjustments & checking individual cow's feed consumption.
- The installation provides a comfortable feeding environment. The cows have confidence when they go to the feeders.
- Local service is extremely important, our FARMTRONIX dealer has done an excellent job servicing our unit.

PERFORMANCE 130 Cows Milking* ...

Previous Feeding Program T.M.R.
