THERE'S NO BETTER WAY TO HANDLE HIGH MOISTURE CORN.

AND WE CAN PROVE IT TO YOU.

The many benefits of high moisture corn are all well known these days: No dryer costs, reduced shrinkage, less labor, less grain damage, fewer field losses, fewer bad weather problems—and a great feed!

And the only way to process high-moisture corn most effectively is with a Madison Grain-O-Matic[®]. Here's why:

The light gray color of the Vibra-Cor[®] staves reflect direct sun ray heat 2½ times better than the dark color used by others! These thicker truss-beam design staves also provide superior insulation value.

Thus gases in the Grain-O-Matic[®] structure expand and contract much less than in a steel structure. Inside pressure is regulated by a precision vacuum and pressure valve. Every structure is air-pressure tested by experienced Madison crews. Result: Better feed and no breather bags, so you can fill clear to the top of the structure with nutrition packed high-moisture grain. And you also get the Madison/Laidig bottom unloader that provides fast, positive delivery day after day for a long, long time.
