
Special No-till Report:

IF YOU KNOW WHAT BRONCO® CAN DO, YOU SHOULD KNOW WHAT OTHER NO-TILL HERBICIDES CAN'T.

Weed roots can be a big problem for no-till farmers because they compete with your corn and soybeans during early stages of growth. Weed roots that survive (even after other herbicides burn back the foliage above ground) can significantly affect corn and soybean yields.

But now you can knock out those weed roots once and for all, plus get the extra convenience of preemergent seedling control all in one package. With Bronco® herbicide—the no-till herbicide that combines more weed control features than any other no-till herbicide.

	Preceptal tank mix	Bronco®

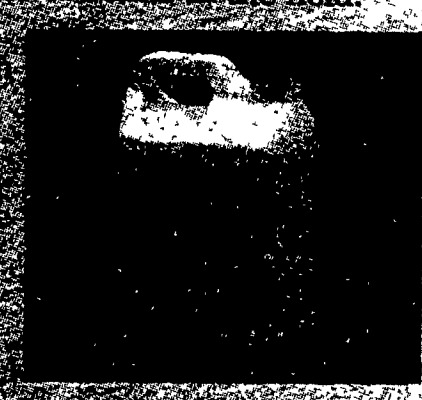
[illegible] Also no [illegible] weeds, but yet [illegible] suppressed for 28 [illegible] broadleaves.

[illegible] foxtail, fall panicum, crabgrass, black [illegible]

[illegible] Bronco formulation features [illegible] application convenience requires only about half the [illegible] volume of a typical paraquat tank [illegible] This means fewer refills in the field.

[illegible] Bronco

[illegible] DAT



[illegible] THE NEW STANDARD IN WEED CONTROL.
