Local Distributor for vac-u-vator®
Dealer inquiries invited in some areas.

Compare the cost effectiveness of a vac-u-vator® before spending money to repair or extend your present auger or belt conveyor system

Pneumatic conveyors are used by all major seaports around the world to discharge and transfer shiploads of grain. The reason is pneumatic conveyors have proven to be most cost effective way to move grain. Most grain farmers and grain transfer storage companies think of Vac-U-Vators as being a versatile, practical supplement to their existing mechanical conveyor systems—and they are. However, Vac-U-Vators are also a highly cost effective alternative to mechanical conveyor systems. So, instead of investing more to repair, replace or extend your present bucket, belt or auger system, we suggest you consider switching to a modern, efficient Vac-U-Vator pneumatic conveying system.

Efficient dependable operation
1. Vacuum pulls grain into the system
2. Gravity separation in the cyclone allows grain to pass through the 3 airlock into the 4 pressurized airstream which pushes it to its destination
