

Well prepared, deeply spaded bed in well-drained area. Dig each hole 15" to 18" wide and as deep. Add a quart of peat moss or compost and mix well with the soil. Form blunt cone of the mixture in planting hole.

Prune all rose canes to 12" and remove any broken or injured roots. Position rose on soil cone so that bud union (swelling at base of stem) is just above the ground level after the ground settles in mild climates and about 1" below the surface in climates where winter temperature falls below freezing. Spread roots out in a natural manner down slope of mound.

Work in soil around roots to eliminate any air pockets. Firm soil about roots and add more soil until hole is three-fourths full, then firm with foot or tamper, using care not to injure roots.

Fill remainder of hole with water and allow it all to soak in, then refill. After water drains, see that bud union remains at proper level and fill remainder of hole with soil and tamp. Head canes back to about eight inches, making cuts one-fourth inch above an outside bud.

Mound soil around and over plant to height of eight to ten inches. This protects the rose canes from drying out. When buds break, gradually remove mound of soil - probably within a week or ten days. Loosen name tag so that it does not constrict cane. When vigorous growth starts, apply plant food according to manufacturer's specifications.

## Rose planting...in five simple steps

LANCASTER — The proper planting of roses requires neither great gardening skill nor experience. Simply use a little common sense in your choice of location, follow the five steps as outlined, and you will have given your roses as good a start in life as could be desired. The procedures outlined were developed by All-American Rose Selections, the national rose-testing organization.

They suggest that, in addition to the proper planting techniques as described in this article, the following are essentials to successful rose growing: healthy plants of good varieties, well prepared beds having good drainage, a minimum of at least a half day of sunshine in the area in which the roses are planted, and plant as early as possible.

**LONG JOHN BALMER INSULATION**  
643 Perry Rd. Manheim, PA

**They're both doing the same thing ...**

**...wasting energy.**

Whether you spin your wheels for lack of traction, operate tractor(s) powered with inefficient engines, or pour fuel on the ground . . . you're wasting fuel SAME is the tractor for times like these. SAME has 4WD, a full gear range, long low design and even weight distribution for less wheel slippage, less tire wear, less soil compaction and maximum u-m traction. And SAME full drive is designed and engineered as an integral part of the tractor — not an add on.

SAME is powered by a fuel efficient direct injection air cooled diesel engine for substantial savings on fuel, minimum maintenance costs and longer service life. (SAME has a limited 2-yr./3000 hrs. warranty — first in the industry.)

SAME 4WD and 2WD air-cooled diesel tractors range from 35 to 140 h.p. We are eager to show you their superior features and standard equipment, and explain the substantial savings they offer in purchase price, operation costs and maintenance costs. Stop in soon for all the eye opening details.
